Manager, Claims Insights

TD Insurance — Toronto, Ontario

Dear Hiring Manager,

I am applying for the Business Insight Analyst position with TD Insurance. I currently live in Toronto, Canada; I completed my Master of Business Analytics at Edith Cowan University in Australia and my Integrated Master of Business Administration at Atmiya University in India. I offer an early-career foundation in advanced Excel, PostgreSQL, SQL, KPI reporting, data validation, business analysis, and stakeholder communication.

As a Data Intern at AYLA Solutions in Australia, I gathered and documented business and reporting requirements, translated stakeholder questions into structured analytical tasks, supported SQL extraction and validation, and prepared advanced Excel reports and dashboard insights for performance tracking. Agile planning and review sessions strengthened my progress communication, responsiveness to evolving requirements, and analytical documentation.

Healthcare Patient & Hospital Analytics provides my closest evidence for the Claims Insights mandate. I modelled patients, clinicians, appointments, treatments, billing, and insurance claims in PostgreSQL and analyzed completion, treatment costs, billing status, workload, and claims using CTEs, segmentation, rankings, running totals, lag comparisons, and window functions. I documented assumptions, repeatable validation, and AI-assisted operational insights and recommendations grounded in SQL outputs. E-commerce and HR projects add revenue, payment, customer, compensation, attendance, and performance analysis.

My graduate coursework in Analytics and Business Decision Making, Databases and Business Intelligence, Machine Learning, Business Systems Analysis, and Project Management supports my quantitative and delivery foundation. Earlier roles in India developed my record accuracy, workflow coordination, client communication, reporting support, and care with confidential information.

I do not yet have General Insurance employment or two years of analyst experience, and I have not used Python or R. My strongest hands-on tools are SQL and advanced Excel, supported by claims-related portfolio evidence and Power BI dashboard planning. TD Insurance's collaborative Claims Insights model, customer focus, and investment in colleague development make this a compelling opportunity to contribute disciplined analysis while building deeper insurance expertise within the team.

Thank you for your time and consideration. I look forward to discussing how I could contribute to your team.

Best regards,

Jainali Mehta
