**RE: Business Analyst, Canada Life**

Dear Hiring Manager,

I am applying for the temporary full-time Business Analyst position with Canada Life. I completed a Master of Business Analytics at Edith Cowan University in Australia after earning an Integrated Master of Business Administration in India, and I now live in Toronto. My early-career foundation combines requirements documentation, process thinking, advanced Excel reporting, SQL, data validation, stakeholder communication, and Power BI dashboard planning.

At AYLA Solutions in Australia, I gathered and documented business and reporting requirements, supported SQL-based extraction and validation, prepared advanced Excel reports, and contributed insights for performance tracking. Participating in Agile planning and review sessions strengthened my ability to clarify reporting needs, organize analytical work, and communicate progress within a changing delivery environment.

My portfolio shows how I connect business questions, data structures, validation, and recommendations. In E-Commerce Sales Analytics, I modelled customer, order, product, payment, and revenue data and documented decision-focused KPIs and Power BI dashboard plans. In Healthcare Patient & Hospital Analytics, I modelled billing and insurance-claim data and analyzed service, cost, workload, billing, and claim measures. A Bank of Baroda project also demonstrates Excel and SQL transaction analysis and service recommendations.

Earlier roles at Trans Globe Education and Arihant Investment developed my workflow coordination, reporting support, confidential record handling, and client communication. Graduate coursework in Business Systems Analysis, Business Process Management, Project Management, and Analytics and Business Decision Making further strengthened my ability to connect processes, requirements, data, and implementation considerations.

Canada Life's purpose of improving Canadians' financial, physical, and mental well-being makes this work meaningful to me. I have not yet worked with Canadian insurance products or owned production dashboards, Power Query or Power Automate solutions, formal test strategy, UAT, or change implementation. I would bring an honest analytical foundation, careful documentation, and the motivation to learn Canada Life's products, systems, controls, and delivery standards while contributing effectively under team guidance.

Thank you for your consideration. I would welcome the opportunity to discuss how my requirements, reporting, and analytical foundation could support Canada Life's business acquisition and strategic initiatives.

Best regards,  
Jainali Mehta
