RE: Business Operations Coordinator, Makeship

Dear Hiring Manager,

I am applying for the Business Operations Coordinator position with Makeship. I completed a Master of Business Analytics at Edith Cowan University in Australia and now live in Toronto. My foundation combines Australian Data Intern experience with earlier operations-support roles in India, giving me practical experience in workflow coordination, documentation, reporting, stakeholder communication, data quality, and organized follow-through.

At AYLA Solutions in Australia, I gathered and documented reporting requirements, supported SQL-based extraction and validation, prepared advanced Excel reports, and contributed performance-tracking insights. Participating in Agile planning and review sessions strengthened my ability to clarify needs, organize analytical work, communicate progress, and maintain dependable shared documentation.

My earlier roles at Trans Globe Education and Arihant Investment developed the operational side of this foundation. I maintained accurate and confidential records, coordinated application and process updates with students and institutions, supported reporting and market research, and communicated with clients while managing changing needs. These responsibilities required careful information handling, responsiveness, and the discipline to keep workflows moving without losing detail.

My E-Commerce Sales Analytics project provides relevant technical context for Makeship's campaign and product environment. I modelled customers, products, orders, line items, and payments; defined recognized-revenue rules; analyzed customer spend, order frequency, product rankings, monthly revenue, and payment methods; and added repeatable validation and recommendations. The work strengthened my ability to trace related operational data, identify quality issues, and translate results into clear next steps.

I have not yet worked directly with Shopify, Airtable, Zapier, HubSpot, BigQuery, Miro, or Figma, and I would not overstate that gap. I bring transferable database, reporting, process-documentation, and coordination skills, plus a demonstrated willingness to learn unfamiliar systems. Makeship's community-powered model and the coordination required across product, sales, finance, marketing, engineering, and manufacturing make this a particularly meaningful environment in which to apply those strengths and grow into low-code workflow ownership over time.

Thank you for your time and consideration. I look forward to discussing how I could contribute to your team.

Best regards,
Jainali Mehta
