RE: Data Analyst, SOCAN

Dear Hiring Manager,

I am applying for the Data Analyst position with SOCAN. I completed a Master of Business Analytics at Edith Cowan University in Australia and now live in Toronto. My foundation combines Australian Data Intern experience with PostgreSQL, SQL, relational modelling, data-quality controls, KPI analysis, reporting requirements, technical documentation, and decision-focused communication.

At AYLA Solutions in Australia, I gathered and documented reporting requirements, supported SQL-based extraction and validation, prepared advanced Excel reports, and contributed dashboard insights for performance tracking. Through Agile planning and review sessions, I learned to clarify loosely defined analytical questions, organize work, communicate progress, and maintain reliable documentation with colleagues.

My three published analytics projects demonstrate the data fundamentals behind SOCAN's role. I designed normalized PostgreSQL models for e-commerce, healthcare, and workforce data; used joins, CTEs, segmentation, rankings, running totals, lag comparisons, and window functions; and added repeatable validation and GitHub Actions checks. I defined and interpreted operational and financial KPIs, investigated patterns across related datasets, and converted validated SQL findings into documented recommendations and Power BI KPI and dashboard plans for stakeholder reporting.

Earlier roles at Trans Globe Education and Arihant Investment strengthened my reporting support, market research, workflow coordination, confidential record handling, and attention to accuracy under competing deadlines. Graduate study in databases, business intelligence, machine learning, business systems, and enterprise architecture reinforced my ability to connect data structures with business processes. I am ready to transfer these foundations into Databricks while deliberately developing the Python, Spark, Lakehouse, and semantic-layer capabilities this environment requires.

I am drawn to SOCAN because its work turns complex usage and licensing information into fair royalty outcomes for music creators, while its careers materials emphasize innovative technology, inclusion, and professional learning. I would welcome the opportunity to contribute rigorous SQL analysis, dependable quality checks, clearly documented KPIs, and thoughtful reporting while growing within SOCAN's modern analytics environment and meaningful mission.

Thank you for your time and consideration. I look forward to discussing how I could contribute to your team.

Best regards,
Jainali Mehta
