**Hiring Manager, Accenture Australia — Australia**

Dear Hiring Manager,

I am applying for the Business Analyst position with Accenture Australia. I currently live in Toronto, Canada; my education and work experience are international rather than Canadian. I completed a Master of Business Analytics at Edith Cowan University in Australia after an Integrated Master of Business Administration at Atmiya University in India. I offer an early-career foundation in requirements documentation, process analysis, relational data modelling, validation, Agile participation, and stakeholder communication.

As a Data Intern at AYLA Solutions in Australia, I gathered and documented business and reporting requirements, translated stakeholder questions into structured analytical tasks, supported SQL-based extraction and validation, and prepared advanced Excel reports and dashboard insights. I participated in Agile sprint planning and reviews, communicated progress, and maintained accurate analytical documentation. This experience taught me to clarify the question, structure the work, validate the output, and explain findings to stakeholders.

My published e-commerce, healthcare, and HR analytics projects show how I connect business logic with technical detail. I designed normalized PostgreSQL models, documented entity relationships, keys, constraints, business rules, and assumptions, and used SQL to produce decision-focused analysis. Repeatable validation and GitHub Actions checks strengthened output quality and traceability, while the accompanying documentation converted validated findings into operational recommendations and Power BI dashboard plans. These projects provide a practical foundation for discussing data models, process logic, testing discipline, and requirements-to-output alignment.

Earlier roles in India strengthened my workflow coordination, client communication, record accuracy, and discretion with confidential information. Coursework in Business Systems Analysis, Enterprise Architecture, Business Process Management, Databases and Business Intelligence, and Project Management further developed my understanding of how business needs connect to systems and delivery decisions.

Accenture's purpose of combining technology and human ingenuity, its structured career development, and its emphasis on inclusive client delivery are compelling to me. I would bring analytical discipline, clear documentation, dependable stakeholder support, and a learning mindset. I understand that Australian citizenship and security-clearance eligibility are mandatory for this role and would address my eligibility accurately during screening.

Thank you for your time and consideration. I look forward to discussing how I could contribute to your team.

Best regards,

Jainali Mehta
