**Hiring Manager, Deloitte**

Product Engineering & Development

Toronto, ON

Dear Hiring Manager,

I am applying for Deloitte's Business Analyst position (reference code 133988) in Toronto. I completed a Master of Business Analytics at Edith Cowan University in Australia after earning an Integrated Master of Business Administration at Atmiya University in India, and I now reside in Toronto. I offer an early-career foundation in requirements documentation, SQL analysis, data validation, Agile collaboration, AI-assisted analysis, and reporting.

As a Data Intern at AYLA Solutions in Australia, I gathered and documented business and reporting requirements, translated stakeholder questions into structured analytical tasks, supported SQL extraction and validation, and prepared advanced Excel reports and dashboard insights. Through Agile sprint planning and reviews, I communicated progress and maintained accurate analytical documentation. This experience developed the discipline to listen carefully, structure requirements, validate outputs, and explain findings to business stakeholders.

My three published projects provide hands-on evidence of technical problem-solving. E-Commerce Sales Analytics connects customers, products, orders, line items, and payments through a controlled PostgreSQL schema. Healthcare Patient & Hospital Analytics and HR Analytics use relational models, integrity rules, CTEs, and window functions to address operational questions. Across the repositories, I added repeatable validation and GitHub Actions checks, documented AI-assisted recommendations grounded in SQL outputs, and completed Power BI planning. This work strengthened my ability to test assumptions, troubleshoot data issues, and document technical work clearly.

Earlier roles at Trans Globe Education and Arihant Investment strengthened my process coordination, client communication, accurate documentation, and confidential record handling. Graduate coursework in Business Systems Analysis, Databases and Business Intelligence, Machine Learning, Enterprise Architecture, and Project Management broadened my understanding of how business needs, information structures, and delivery practices connect.

I am drawn to Deloitte's Product Engineering & Development team because the work combines client collaboration, emerging technology, responsible AI use, technical delivery, and continuous learning. I would bring a verified SQL and analytics foundation, thoughtful requirements work, dependable testing and documentation, and the curiosity to develop further within Deloitte's application and cloud delivery environment.

Thank you for your time and consideration. I look forward to discussing how I could contribute to your team.

Best regards,

Jainali Mehta
