Hiring Manager

City of Toronto

Parks, Forestry & Recreation – Business & Technology Transformation

Metro Hall, 55 John Street, Toronto, ON

Dear Hiring Manager,

I currently live in Toronto and am applying to the City of Toronto for the Systems Integrator 1 position, Job ID 64493. I earned my Master of Business Analytics from Edith Cowan University in Australia and my Integrated Master of Business Administration from Atmiya University in India. I want to help Parks, Forestry & Recreation connect client requirements, logical data models, validation, documentation, and operational needs in digital delivery.

As a Data Intern at AYLA Solutions in Australia in 2025, I gathered and documented business, data, and reporting requirements and translated stakeholder questions into structured analytical needs and definitions. I supported SQL extraction and validation, prepared advanced Excel reports, and contributed dashboard insights for performance tracking. Through Agile planning and reviews, I communicated progress and findings and maintained clear analytical documentation. This experience developed my ability to connect business questions, data structures, quality checks, and reporting outputs in a collaborative project setting.

My three published PostgreSQL projects provide concrete evidence of logical data modelling, integration relationships, validation, and solution documentation. In e-commerce analytics, I connected customers, products, orders, line items, and payments through keys and constraints and documented revenue and transaction rules. Healthcare and workforce projects extend this work across six operational entities and employee, salary, performance, and attendance information. Across the repositories, I used joins, CTEs, rankings, running totals, lag analysis, and window functions; added repeatable validation and GitHub Actions checks; documented assumptions; and translated findings into Generative AI-assisted recommendations and Power BI reporting plans.

My earlier roles at Trans Globe Education and Arihant Investment in India strengthened my workflow coordination, reporting support, client and institutional communication, records management, and careful handling of confidential information. Graduate coursework in Enterprise Architecture, Business Systems Analysis, Databases and Business Intelligence, Project Management, and Business Process Management strengthened my understanding of systems, processes, data, and structured delivery.

I would bring a dependable database, requirements, and validation foundation while learning software-delivery methods, formal test-script practices, ETL/SSIS concepts, web and mobile interfaces, and work and asset management systems. I am motivated to learn from technical specialists, contribute precise documentation, and support high-quality continuous improvement.

Thank you for considering my application. I would welcome the opportunity to discuss my contribution to the Business & Technology Transformation team.

Best regards,

Jainali Mehta
