Hiring Manager | Analytics Team | Toronto, ON

Re: Business Analyst and Data Analyst Opportunities

Dear Hiring Manager,

I am applying for entry-level Business Analyst and Data Analyst opportunities in Toronto. I recently completed a Master of Business Analytics at Edith Cowan University in Australia and previously completed an Integrated Master of Business Administration at Atmiya University in India. I bring practical strengths in PostgreSQL, SQL, advanced Excel, Power BI, reporting, and requirements documentation.

As a Data Intern at AYLA Solutions in Australia, I supported SQL-based data extraction, advanced Excel reporting, and dashboard insights for business performance tracking. I also gathered and documented reporting requirements and participated in Agile sprint planning and review sessions. This experience taught me to connect stakeholder questions with accurate data and clear analytical outputs.

My portfolio extends that foundation through reproducible analytics projects. I built PostgreSQL models for e-commerce, healthcare, and workforce analysis, wrote queries using joins, CTEs, rankings, segmentation, and window functions, and added validation through scripts and GitHub Actions. I also developed a Power BI sales dashboard using DAX and dynamic filters to examine regional KPIs, product performance, and location trends.

Earlier roles at Trans Globe Education and Arihant Investment strengthened my accuracy, confidential record handling, workflow coordination, and client communication. These experiences complement my technical training and help me approach analysis with both business context and attention to detail.

I am particularly interested in roles that connect careful analysis with practical business decisions, and I would welcome the opportunity to contribute reliable analysis, documentation, and stakeholder support.

Thank you for your consideration.

Sincerely,
Jainali Mehta
