RE: Technology Consultant (September 2026 Start), Management Solutions

Dear Hiring Manager,

I am applying for Management Solutions' September 2026 technology-consulting opportunity. I completed a Master of Business Analytics at Edith Cowan University in Australia and now live in Toronto. The role's combination of databases, digital transformation, data quality, business systems, and multidisciplinary consulting closely matches the technical and analytical direction in which I want to develop.

As a Data Intern at AYLA Solutions in Australia, I gathered and documented business and reporting requirements, supported SQL-based extraction and validation, prepared advanced Excel reports, and contributed dashboard insights for performance tracking. Participating in Agile planning and review sessions strengthened my ability to clarify needs, organize analytical work, communicate progress, and maintain accurate documentation. This experience taught me to connect operational questions with dependable data and structured reporting outputs.

My published portfolio provides deeper database evidence. In the e-commerce repository, I designed a PostgreSQL model linking customers, products, orders, line items, and payments, applied primary-key, foreign-key, uniqueness, and value checks, and translated recognized-revenue definitions into testable rules. My healthcare and workforce projects further demonstrate normalized modelling, joins, CTEs, rankings, running totals, lag comparisons, integrity checks, and repeatable validation. Across the repositories, I added GitHub Actions checks, SQL-grounded AI-assisted findings, and structured Power BI plans.

Earlier roles at Trans Globe Education and Arihant Investment developed my process coordination, reporting support, client communication, confidential record handling, and attention to data accuracy. Graduate coursework in Databases and Business Intelligence, Business Systems Analysis, Enterprise Architecture, Business Process Management, Project Management, and Machine Learning strengthened my understanding of how data, processes, technology, and organizational needs connect during transformation.

My strongest verified technical capability is relational databases and SQL; I would not overstate my experience as advanced general-purpose programming, software engineering, Big Data, cybersecurity, or production technology implementation. I would bring strong learning agility, careful problem solving, a responsible work ethic, and the discipline to build those capabilities through Management Solutions' intensive training model. The opportunity to contribute alongside multidisciplinary teams while learning from high-profile transformation projects is especially compelling to me.

Thank you for your consideration. I look forward to discussing how my database foundation, analytical discipline, and commitment to learning could contribute to Management Solutions.

Best regards,
Jainali Mehta
