RE: Associate IT Business Systems Analyst, Mohawk Medbuy Corporation

Dear Hiring Manager,

I am applying for the Associate IT Business Systems Analyst position with Mohawk Medbuy Corporation. MMC's IT Member Services work is compelling because dependable requirements, documentation, systems, and user support ultimately help Canadian health care organizations operate effectively. I completed a Master of Business Analytics at Edith Cowan University in Australia and now live in Toronto, with an early-career foundation in requirements gathering, process documentation, data validation, and stakeholder communication.

At AYLA Solutions in Australia, I gathered and documented business and reporting requirements, supported SQL-based extraction and validation, prepared advanced Excel reports, and contributed dashboard insights for business performance tracking. Participating in Agile sprint planning and reviews strengthened my ability to clarify operational needs, communicate progress, and maintain accurate analytical documentation. These habits are directly relevant to stakeholder meetings, specifications, and traceable requirements for IT initiatives.

My published healthcare analytics project demonstrates the care I bring to connected systems and quality checks. I modelled patients, clinicians, appointments, treatments, billing, and claims; defined integrity rules; used CTEs and window functions to evaluate completion, costs, billing status, workload, and claims; and added automated validation and GitHub Actions checks. Across three repositories, I documented findings and recommendations grounded in verified SQL outputs and completed Power BI KPI and dashboard planning. This work has trained me to test definitions, identify exceptions, and explain technical logic clearly.

Earlier roles at Trans Globe Education and Arihant Investment developed my customer focus, workflow coordination, accurate record management, and careful handling of confidential information. I coordinated application and process updates with students and institutions while maintaining reliable documentation. Graduate coursework in Business Systems Analysis, Business Process Management, Databases and Business Intelligence, Supply Chain Analytics, and Project Management further strengthened my ability to connect user needs, processes, data, and delivery considerations.

I would bring precise documentation, analytical discipline, dependable follow-through, and a strong learning mindset while developing deeper hands-on capability in business systems support, testing, troubleshooting, and maintenance. MMC's not-for-profit shared-services mission makes that growth especially meaningful. Thank you for your consideration; I look forward to discussing how I could contribute to IT Member Services.

Best regards,
Jainali Mehta
