RE: Sales Operations Analyst, Olympia Tile

Dear Hiring Manager,

I am applying for the Sales Operations Analyst position with Olympia Tile. I completed a Master of Business Analytics at Edith Cowan University in Australia and now live in Toronto. The opportunity to connect customer, product, revenue, and operational data with practical sales decisions strongly matches the analytical career I want to build, while Olympia Tile's history, customer focus, and cross-functional culture make the role especially compelling to me as an early-career analyst.

As a Data Intern at AYLA Solutions in Australia, I gathered and documented business and reporting requirements, supported SQL-based extraction and validation, prepared advanced Excel reports, and contributed dashboard insights for performance tracking. Agile planning and review sessions strengthened my ability to clarify operational needs, organize analysis, communicate progress, and maintain accurate documentation. This experience developed the disciplined reporting and follow-through needed to support recurring management decisions with consistent definitions and evidence.

My e-commerce portfolio project provides direct evidence relevant to sales operations. I modelled customers, products, orders, line items, and payments; defined recognized-revenue and integrity rules; and analyzed customer spend, order frequency, product rankings, monthly revenue, and payment methods before documenting validated recommendations. A Bank of Baroda project adds customer-behaviour analysis with Excel and SQL, while a Google Forms research project examined small-business adoption barriers using formulas, filters, pivot tables, percentages, and charts.

Earlier roles at Trans Globe Education and Arihant Investment developed my client communication, process coordination, market-research support, confidential record handling, and attention to data accuracy. My published workforce repository further demonstrates KPI analysis across headcount, compensation, performance, attendance, hiring, and tenure. Across the repositories, I added repeatable validation, GitHub Actions checks, SQL-grounded AI-assisted findings, and Power BI KPI and dashboard plans, while accurately distinguishing planning from implementation.

I have not yet administered a CRM, maintained a professional sales forecast, or produced executive dashboards for a VP of Sales, and I would not overstate that experience. I would bring strong Excel and SQL foundations, careful data-quality habits, business curiosity, and a disciplined approach to learning Olympia Tile's CRM, sales processes, definitions, and reporting cadence. I would welcome the chance to earn trust through accurate work and grow into a dependable partner for Sales, Marketing, Finance, Procurement, and IT.

Thank you for your consideration. I look forward to discussing how my analytical foundation, customer focus, and commitment to operational improvement could contribute to Olympia Tile.

Best regards,
Jainali Mehta
