RE: Student Intern, Procurement Sourcing Analyst, Celestica

Dear Hiring Manager,

I am applying for Celestica's Student Intern, Procurement Sourcing Analyst position beginning in September 2026. I completed a Master of Business Analytics at Edith Cowan University in Australia and now live in Toronto. The opportunity to combine Excel, databases, product and order analysis, market research, process improvement, and global collaboration within Corporate Supply Chain closely matches the analytical career I want to build.

As a Data Intern at AYLA Solutions in Australia, I gathered and documented business and reporting requirements, supported SQL-based extraction and validation, prepared advanced Excel reports, and contributed dashboard insights for performance tracking. Participating in Agile planning and review sessions strengthened my ability to clarify needs, organize work, communicate progress, and maintain accurate documentation. These habits are directly relevant to consolidating information, reporting performance measures, and supporting dependable business processes.

My e-commerce repository provides the closest evidence to supply-chain analysis. I modelled customers, products, orders, line items, and payments; applied primary-key, foreign-key, uniqueness, and value checks; and analyzed product rankings, order frequency, monthly revenue, and payment methods before documenting recommendations. A healthcare project adds treatment-cost, billing, workload, and claims analysis using CTEs, rankings, running totals, and lag comparisons. Together, these projects demonstrate careful data preparation, connected business information, and repeatable analytical logic.

At Trans Globe Education, I supported market research, reporting, workflow coordination, client communication, and application updates across students and institutions. At Arihant Investment, I handled data entry and maintained accurate confidential records. A Bank of Baroda customer project and Google Forms research project further developed my Excel, SQL, trend-analysis, survey, and recommendation skills. Across published repositories, I also added validation, GitHub Actions checks, SQL-grounded AI-assisted findings, and Power BI plans.

I have not yet worked in procurement, negotiated supplier tenders, run total-cost-of-ownership analysis, or used SAP, Access, or commodity-sourcing systems, and I would not overstate that experience. I would bring strong Excel and SQL foundations, careful data-quality habits, business curiosity, and the discipline to learn Celestica's sourcing processes and tools after training. Celestica's global reach, technology focus, mentorship, collaborative culture, and commitment to continuous improvement make this an exceptional environment in which to contribute and grow.

Thank you for your consideration. I look forward to discussing how my analytical foundation, reliability, and learning agility could contribute to Celestica's Corporate Supply Chain team.

Best regards,
Jainali Mehta
