RE: Associate, Institutional Equity Research (Information Technology), CIBC

Dear Hiring Manager,

I am applying for CIBC Capital Markets' Associate, Institutional Equity Research position supporting Information Technology coverage. I completed a Master of Business Analytics at Edith Cowan University in Australia and an Integrated Master of Business Administration in India, and I now live in Toronto. The opportunity to combine company and industry research, quantitative analysis, technology, disciplined writing, and client service closely matches the research career I want to build.

As a Data Intern at AYLA Solutions in Australia, I gathered and documented business and reporting requirements, supported SQL-based extraction and validation, prepared advanced Excel reports, and contributed dashboard insights for performance tracking. Agile planning and review sessions strengthened my ability to clarify analytical questions, organize evidence, communicate progress, and maintain accurate documentation. This experience developed the precision and follow-through needed for recurring research deliverables.

A Bank of Baroda project provides direct financial-services research evidence: I used Excel and SQL to clean customer data, identify patterns and trends, and document recommendations. My e-commerce repository adds a connected customer, product, transaction, revenue, and payment model. I established recognized-revenue and integrity rules and analyzed spend, order frequency, product rankings, monthly revenue, and payment methods before documenting validated findings. These projects strengthened my ability to turn detailed data into clear business observations while maintaining traceable logic.

My healthcare repository adds cost, billing, workload, and claims analysis using CTEs, rankings, running totals, and lag comparisons, while survey research developed my market-research and written-recommendation skills. Across projects, I added repeatable validation, GitHub Actions checks, SQL-grounded AI-assisted findings, and Power BI plans. Earlier roles at Trans Globe Education and Arihant Investment developed my client communication, market-research support, confidential financial-services record handling, and attention to detail. My NISM Series XII credential further reflects a genuine interest in securities markets.

I have not yet built professional financial models, performed company valuation, covered public equities, or worked with institutional investors and management teams, and I would not overstate that experience. I would bring strong Excel and SQL foundations, analytical discipline, careful writing, technology aptitude, and the humility to learn CIBC's modelling, valuation, research, and compliance standards. CIBC's relationship-oriented culture and emphasis on original ideas, teamwork, accountability, and client value make this an exceptional environment in which to contribute and grow.

Thank you for your consideration. I look forward to discussing how my quantitative foundation, market interest, and learning agility could support CIBC's Information Technology research franchise.

Best regards,
Jainali Mehta
