RE: AI Response Evaluator, Mercor

Dear Hiring Manager,

I am applying for the AI Response Evaluator opportunity with Mercor. I completed a Master of Business Analytics at Edith Cowan University in Australia and now live in Toronto. My foundation combines critical reading, requirements interpretation, quantitative and qualitative analysis, structured documentation, and careful validation against defined rules. I am drawn to work where quality depends on noticing unsupported assumptions, reasoning gaps, inconsistent criteria, and details that a surface-level review could miss.

At AYLA Solutions in Australia, I gathered and documented business and reporting requirements, supported SQL-based extraction and validation, prepared advanced Excel reports, and contributed evidence-based performance insights. Participating in Agile planning and review sessions strengthened my ability to interpret expectations, organize analytical work, communicate progress, and maintain documentation that others could review consistently. This experience developed the discipline to separate a requested outcome from the evidence used to support it.

My project work provides practical examples of criteria-based judgment. In E-Commerce Sales Analytics, I defined recognized revenue to exclude pending, refunded, and cancelled activity, enforced relational constraints, and added repeatable checks. In Healthcare Patient & Hospital Analytics, I examined linked operational and claims data using CTEs and window functions and added automated validation. For an online GST-filing study, I designed a survey, organized and analyzed responses in Excel, identified adoption patterns and barriers, and documented findings and recommendations.

Earlier roles at Trans Globe Education and Arihant Investment developed my research, record accuracy, written follow-up, client communication, and confidential information handling. Coursework in Analytics and Business Decision Making, Machine Learning, Business Systems Analysis, and Databases and Business Intelligence strengthened my ability to examine complex information from both business and technical perspectives.

Formal AI-response evaluation would be a new professional setting for me. My approach would be to read the complete task and rubric, identify explicit and implicit requirements, establish the relevant evidence, examine factual accuracy and logical completeness, apply each criterion consistently, and write a concise rationale that explains the deciding strengths and failures. Mercor's work is compelling because rigorous human judgment directly supports the quality of frontier AI systems.

Thank you for considering my application. I would welcome the opportunity to demonstrate my analytical judgment, attention to detail, and structured writing through Mercor's evaluation process.

Best regards,
Jainali Mehta
