RE: Generalist Expert, AI Training and Evaluation, Mercor

Dear Hiring Manager,

I am applying for the Generalist Expert opportunity supporting AI training and evaluation at Mercor. I completed a Master of Business Analytics at Edith Cowan University in Australia and now live in Toronto, Canada. My background combines an Integrated Master of Business Administration, Australian Data Intern experience, and earlier work in education and investment services. That breadth has trained me to move between business documents, spreadsheets, research findings, analytical outputs, and client-facing communication while maintaining attention to accuracy, clarity, and completeness.

At AYLA Solutions in Australia, I gathered and documented business and reporting requirements, supported SQL-based extraction and validation, prepared advanced Excel reports, and contributed evidence-based performance insights. Agile planning and review sessions strengthened my ability to interpret stated expectations, check whether an output answered the underlying need, communicate progress, and maintain documentation that another reviewer could follow consistently.

My project work spans several types of professional material. For an online GST-filing study, I designed a survey, reviewed and organized responses in Excel, created charts and pivot-table analysis, and documented findings and recommendations. In a Bank of Baroda project, I cleaned and analyzed transaction patterns, created visualizations, and presented recommendations for customer engagement and service delivery. In E-Commerce Sales Analytics, I applied precise transaction-state rules, relational constraints, and repeatable checks so later conclusions remained grounded in valid data.

Earlier roles at Trans Globe Education and Arihant Investment developed my document handling, research, written updates, record accuracy, confidentiality, and client service. I work with Microsoft Office, Google Workspace, advanced Excel, pivot tables, and Google Forms, supported by coursework across business systems, decision making, people analytics, supply chain analytics, and project management.

Formal AI-output ranking would be a new professional setting for me, and I would approach it with disciplined judgment: identify the document's purpose and audience, apply the supplied criteria, verify facts and calculations, examine organization and formatting, flag inconsistencies or omissions, and write a concise rationale explaining the rating. Mercor appeals to me because careful human review directly improves the quality of real-world work produced by frontier systems.

Thank you for considering my application. I would welcome the opportunity to demonstrate my cross-domain judgment, attention to detail, and structured written feedback through Mercor's evaluation process.

Best regards,
Jainali Mehta
