RE: Media Operations Coordinator, Klick Media

Dear Hiring Manager,

I am applying for the Media Operations Coordinator position with Klick Media. I completed a Master of Business Analytics at Edith Cowan University in Australia and now live in Toronto. Klick's combination of audience insight, data, technology, and measurable health-media impact strongly appeals to me. I would bring an early-career foundation in spreadsheet reporting, QA-minded validation, documentation, version control, and dependable operational coordination.

At AYLA Solutions in Australia, I gathered and documented business and reporting requirements, supported SQL-based extraction and validation, prepared advanced Excel reports, and contributed dashboard insights for performance tracking. Through Agile planning and review sessions, I learned to clarify inputs, communicate progress, maintain accurate documentation, and help analytical work move through a structured delivery cycle—habits directly relevant to clean campaign handoffs and documented QA.

My portfolio provides concrete examples of measurement discipline and repeatable checking. In E-Commerce Sales Analytics, I defined revenue rules, analyzed customer, product, monthly revenue, and payment measures, and added validation and GitHub Actions checks. My Healthcare Patient & Hospital Analytics project applies the same care to appointments, billing, claims, and clinician-workload measures, giving me useful exposure to health-related data. I also designed a Google Forms study and reconciled survey responses in Excel with formulas, filters, pivot tables, percentages, and charts. Across these projects, I used Generative AI to develop prompts and support interpretation, while grounding conclusions in validated outputs.

Earlier roles at Trans Globe Education and Arihant Investment strengthened my record accuracy, process-update coordination, reporting support, client communication, and confidentiality. These responsibilities taught me that small errors in documentation or handoffs can create larger downstream problems—the same operating principle behind accurate creative versions, naming, tracking, and issue logs.

I would bring a transparent learning posture to the platform-specific work. I have not yet trafficked a live paid-media campaign or used Campaign Manager 360. My ramp-up approach would be systematic: learn Klick's campaign hierarchy and naming standards, validate briefs, specifications and flight dates, verify landing links and measurement inputs, record QA evidence and issues, and escalate discrepancies with clear context. This method builds on strengths I already use and matches the precision required in regulated health media.

Thank you for considering my application. I would welcome the opportunity to discuss how my analytical discipline, AI-enabled learning, and commitment to accurate execution could support reliable campaign launches at Klick Media.

Best regards,
Jainali Mehta
