**RE: Data Analyst, SOCAN**

Dear Hiring Manager,

I am applying for the Data Analyst position with SOCAN in Toronto. I completed a Master of Business Analytics at Edith Cowan University in Australia and now live in Toronto. SOCAN's not-for-profit purpose—helping music creators and publishers receive the value earned from their work—makes accurate, actionable analytics especially meaningful. I would bring an early-career foundation in PostgreSQL, SQL, advanced Excel, reporting requirements, data-quality testing, KPI design, and Power BI planning.

At AYLA Solutions in Australia, I gathered and documented business and reporting requirements, supported SQL-based extraction and validation, prepared advanced Excel reports, and contributed dashboard and reporting insights for performance tracking. Agile planning and review sessions strengthened my ability to clarify loosely defined needs, communicate progress, and maintain analytical documentation that supports review and handoff.

My E-Commerce Sales Analytics project demonstrates direct relevance to transaction and income-related data. I modelled customers, products, orders, line items, and payments; defined recognized-revenue rules; analyzed customer spend, order frequency, product rankings, monthly revenue, and payment methods; and added repeatable validation and GitHub Actions checks. My workforce and healthcare projects extend that approach to departmental and operational KPIs using CTEs, rankings, running totals, lag comparisons, and window functions. Each project includes AI-assisted interpretation grounded in validated outputs and structured Power BI dashboard planning.

Earlier roles at Trans Globe Education and Arihant Investment strengthened my information-request coordination, record accuracy, workflow support, confidentiality, and client communication. These responsibilities taught me to clarify before acting, keep documentation current, and communicate findings in terms another person can use. Coursework in Databases and Business Intelligence, Analytics and Business Decision Making, Machine Learning, Business Systems Analysis, and Enterprise Architecture supports my interest in modern data platforms.

The next step in my development is applying this foundation in Databricks and expanding my Python, Spark, AI/BI dashboard, and semantic-layer capability. I would learn within SOCAN's approved architecture by tracing data lineage, documenting transformations, reconciling source-to-output results, and seeking peer review.

Thank you for considering my application. I would welcome the opportunity to discuss how my SQL foundation, data-quality discipline, and collaborative learning approach could support SOCAN's Analytics department.

Best regards,  
Jainali Mehta
