RE: Junior Systems Optimization Analyst, Warehousing & Distribution

Dear Hiring Manager,

I am applying for the Junior Systems Optimization Analyst position supporting your Warehousing & Distribution operations in Scarborough. I completed a Master of Business Analytics at Edith Cowan University in Australia and now live in Toronto. My foundation combines systems and process analysis, PostgreSQL and SQL, advanced Excel reporting, data-integrity controls, KPI planning, structured documentation, and cross-functional workflow coordination. I am most engaged by problems where understanding the end-to-end business process is necessary before designing a reliable solution.

At AYLA Solutions in Australia, I gathered and documented business and reporting requirements, supported SQL-based extraction and validation, prepared advanced Excel reports, and contributed performance-tracking insights. Agile planning and review sessions strengthened my ability to clarify operational needs, organize analytical work, communicate progress, and maintain documentation that others could use when reviewing outputs or continuing a workflow.

My published projects demonstrate connected-system and quality-control thinking. In E-Commerce Sales Analytics, I modelled customers, products, orders, line items, and payments, enforced relational constraints, defined transaction-state rules, and added repeatable GitHub Actions checks. My healthcare project linked appointments, treatments, billing, and claims and used automated validation to protect analytical reliability. HR Analytics connected departments, employees, salaries, performance, and attendance while analyzing operational KPIs and planning Power BI dashboard requirements.

Earlier roles at Trans Globe Education and Arihant Investment developed my process documentation, data entry, workflow follow-up, client communication, and confidential-record handling. Coursework in Business Systems Analysis, Databases and Business Intelligence, Business Process Management, Enterprise Architecture, Machine Learning, and Project Management further developed my systems perspective. Those subjects helped me connect users, data, processes, and technology.

My current hands-on tools are SQL/PostgreSQL, advanced Excel, Git and GitHub Actions, Power BI dashboard planning, and AI-assisted analysis grounded in validated outputs. MS Access VBA, DAX dashboard implementation, Power Automate, Power Apps, SharePoint integrations, and C#/Python development are learning priorities rather than experience I would overstate. I would bring a disciplined foundation for learning that stack: understand the workflow and users, map inputs and outputs, define controls, build incrementally, test edge cases, document the solution, and monitor results.

Thank you for considering my application. I would welcome the opportunity to discuss how my systems foundation, data-integrity focus, and structured learning approach could support reliable, scalable operations.

Best regards,
Jainali Mehta
