RE: Project Coordinator, AtkinsRéalis

Dear Hiring Manager,

I am applying for the Project Coordinator position, reference R-160658, with AtkinsRéalis in Mississauga. I completed a Master of Business Analytics at Edith Cowan University in Australia and now live in Toronto. The role's focus on Excel-based tracking, current status reporting, data quality, rigorous follow-up, and technical development aligns closely with how I prefer to work: organize complex information, make progress visible, and help teams close outstanding items.

At AYLA Solutions in Australia, I gathered and documented business and reporting requirements, supported SQL-based extraction and validation, prepared advanced Excel reports, and contributed performance metrics and reporting insights. Participating in Agile planning and reviews strengthened my ability to clarify inputs and expected outputs, communicate progress, maintain current documentation, and support work through a structured delivery cycle.

My published projects reinforce the tracking and quality discipline this position requires. Across e-commerce, healthcare, and workforce datasets, I modelled related records, analyzed status and performance measures, used rankings, running totals, and lag comparisons, documented business rules, and added repeatable validation with GitHub Actions. I also completed Power BI KPI and dashboard planning. Although these are analytical rather than engineering projects, they demonstrate my ability to organize linked information, maintain consistent definitions, investigate discrepancies, and produce traceable reporting outputs.

At Trans Globe Education, I maintained records, supported reporting and workflows, and coordinated process updates with students and institutions. At Arihant Investment, I handled data entry, documentation, confidential records, and daily operational support. These roles developed the persistence to follow up professionally and the care to keep information accurate when others depend on it. Coursework in Project Management, Databases and Business Intelligence, Business Systems Analysis, and Enterprise Architecture complements that practical foundation.

My verified experience does not yet include nuclear engineering, piping isometrics, line lists, P&IDs, MTOs, vendor drawings, or controlled engineering transmittals. I would approach that learning curve through AtkinsRéalis procedures and coaching: learn the required drawing and status terminology, maintain revision-aware trackers, verify mandatory inputs, document holds and owners, escalate delays with evidence, and obtain technical or QA review rather than making unsupported engineering judgments.

Thank you for considering my application. I would welcome the opportunity to discuss how my Excel reporting, data-quality discipline, coordination foundation, and commitment to learning could support Candu Energy and AtkinsRéalis Nuclear project delivery.

Best regards,
Jainali Mehta
