RE: OperateNext — Applied & Cloud Managed Services, Deloitte Canada

Dear Hiring Manager,

I am applying for Deloitte Canada's OperateNext — Applied Managed Services & Cloud Managed Services, New Grad 2027 position, reference 134380. I completed a Master of Business Analytics at Edith Cowan University in Australia and now live in Toronto. The Analytics and Core Business Operations teams particularly match my foundation in business systems, data modelling, process analysis, performance reporting, and recurring operational support. I am motivated by OperateNext's focus on continuously improving systems and processes rather than treating implementation as the end of the client relationship.

At AYLA Solutions in Australia, I gathered and documented business and reporting requirements, supported SQL-based extraction and validation, prepared advanced Excel reports, and contributed performance insights. Agile planning and review discussions strengthened my ability to clarify ambiguous needs, organize inputs and outputs, communicate progress, and maintain current analytical documentation. This experience taught me that dependable data work combines technical accuracy with an understanding of the decisions and operating processes it supports.

My published portfolio applies that discipline across consumer, healthcare, and workforce scenarios. I built normalized PostgreSQL models for e-commerce, healthcare, and HR data; used joins, CTEs, segmentation, rankings, running totals, and window functions; and added repeatable validation and GitHub Actions checks. The analyses examine revenue and payments, appointments and claims, and workforce performance and attendance. Each repository also contains completed AI-assisted interpretation grounded in validated SQL findings and structured Power BI KPI and dashboard planning.

Earlier roles at Trans Globe Education and Arihant Investment developed my workflow management, administrative reporting, client support, confidential record handling, and attention to data integrity. Coursework in Business Systems Analysis, Databases and Business Intelligence, Business Process Management, Enterprise Architecture, and Project Management strengthened my understanding of how data, technology, people, and processes connect. I do not yet have production cloud-platform, ERP-support, or enterprise-integration experience; I would bring a strong learning discipline, careful problem solving, and honest communication while building that depth.

Thank you for considering my application. I would welcome the opportunity to discuss how my analytics foundation, process perspective, adaptability, and client-support experience could help Deloitte deliver reliable ongoing outcomes and continuous value for OperateNext clients.

Best regards,
Jainali Mehta
