RE: Junior Resource Strategy Analyst — AtkinsRéalis

Dear Hiring Manager,

I am applying for the Junior Resource Strategy Analyst position with AtkinsRéalis, requisition R-162682. I completed a Master of Business Analytics at Edith Cowan University in Australia and now live in Toronto. My background combines workforce-focused analytics, advanced Excel and SQL, KPI reporting, requirements documentation, and collaborative project support. I am drawn to this role because it connects workforce data with project portfolios and business priorities to inform capacity, staffing, and resource allocation.

My HR Analytics project provides the strongest role-specific evidence. I built a normalized PostgreSQL model spanning departments, employees, salaries, performance reviews, and attendance, then analyzed headcount, compensation, performance, attendance, hiring, and tenure using CTEs, rankings, and window functions. I added repeatable validation, AI-assisted recommendations grounded in the SQL results, and structured Power BI KPI and dashboard planning. This work strengthened my understanding of how consistent definitions and well-designed measures support workforce decisions and planning discussions.

At AYLA Solutions in Australia, I gathered and documented business and reporting requirements, supported SQL extraction and validation, prepared advanced Excel reports, and contributed performance-tracking insights. Agile planning and review discussions developed my ability to clarify questions, organize inputs and outputs, communicate progress, and maintain current documentation. My Healthcare Patient & Hospital Analytics project adds capacity-adjacent analysis through appointment completion and clinician workload, while E-Commerce Sales Analytics demonstrates monthly trends, rankings, customer activity, and repeatable checks.

Earlier roles at Trans Globe Education and Arihant Investment strengthened my workflow coordination, reporting support, stakeholder communication, confidential record handling, and data accuracy. Coursework in People Analytics, Project Management, Analytics and Business Decision Making, and Supply Chain Analytics further developed my understanding of resource, operational, and planning questions. I have not yet used Bridget Bench, EcoSys, ERP platforms, or Power Query, nor supported formal project controls, earned-value management, workforce budgeting, or professional resource forecasting. I would bring honest communication, strong analytical discipline, and an active learning mindset while developing those capabilities.

Thank you for considering my application. I would welcome the opportunity to discuss how my workforce-analytics foundation, advanced Excel and SQL skills, structured reporting approach, and collaborative working style could support the Project Controls team in making clear, data-driven resource decisions.

Best regards,
Jainali Mehta
