RE: Business Applications Analyst, Affiliated Distributors (AD)

Dear Hiring Manager,

I am applying for the Business Applications Analyst position with Affiliated Distributors (AD). I completed a Master of Business Analytics at Edith Cowan University in Australia and now live in Toronto. My strongest alignment is in PostgreSQL and SQL, relational modelling, advanced Excel, reporting requirements, process documentation, data validation, and user-focused communication. I am particularly interested in the role's combination of operational systems, member and supplier support, and reliable business reporting.

At AYLA Solutions in Australia, I gathered and documented business and reporting requirements, supported SQL extraction and validation, prepared advanced Excel reports, and contributed dashboard and reporting insights for business performance tracking. Agile planning and review sessions strengthened my ability to clarify questions, organize inputs and outputs, communicate progress, and maintain current documentation. This foundation is directly relevant to connecting to relational data, investigating reporting questions, and translating business needs into clear analytical work.

My E-Commerce Sales Analytics project provides relevant transactional-data evidence. I modelled customers, products, orders, line items, and payments; applied keys, uniqueness rules, and checks; defined recognized revenue; and analyzed monthly revenue, order frequency, product rankings, customer spend, and payment methods. Healthcare Patient & Hospital Analytics adds CTEs and window functions for segmentation, rankings, running totals, and lag comparisons. I added repeatable validation and GitHub Actions checks before developing AI-assisted recommendations grounded in the SQL results.

Earlier roles at Trans Globe Education and Arihant Investment developed my client support, external-party coordination, process updates, administrative reporting, and careful record handling. I learned to communicate clearly, maintain reliable information, and support recurring workflows across users and organizations. Coursework in Supply Chain Analytics, Business Systems Analysis, Databases and Business Intelligence, and Business Process Management further strengthened my understanding of connected operational processes.

I have not yet worked directly with LBMX, Solution Center, Qlik, ERP platforms, or EDI transactions, and I would not overstate that experience. I would bring a strong learning approach grounded in SQL, data validation, requirements clarification, documentation, and user support while developing AD's platform and procure-to-pay knowledge. My completed Power BI work is dashboard planning rather than published interactive delivery.

Thank you for considering my application. I would welcome the opportunity to discuss how my analytical foundation, structured communication, and careful approach to operational data could support AD's internal teams, distributor members, and supplier partners.

Best regards,
Jainali Mehta
