RE: Data Analyst, Canada Life

Dear Hiring Manager,

I am applying for the Data Analyst position with Canada Life's Data Analytics and Reporting team. I completed a Master of Business Analytics at Edith Cowan University in Australia and now live in Toronto. My early-career foundation combines SQL, relational modelling, data validation, KPI logic, advanced Excel reporting, requirements gathering, and decision-focused communication.

At AYLA Solutions in Australia, I gathered and documented business and reporting requirements, supported SQL-based extraction and validation, prepared advanced Excel reports, and contributed dashboard insights for performance tracking. This experience taught me to begin with the business question, clarify the intended output, test the underlying data, and communicate progress through Agile planning and review sessions. It also reinforced that a useful analysis must be understandable and traceable, not merely technically correct.

My published projects demonstrate how I translate operational questions into structured analytical work. In E-Commerce Sales Analytics, I connected customers, products, orders, line items, and payments through a PostgreSQL model, applied integrity rules, defined recognized-revenue and KPI logic, and added repeatable validation before developing business recommendations. In Healthcare Patient & Hospital Analytics, I modelled operational and financial relationships across appointments, treatments, billing, and claims, then used CTEs and window functions to analyze completion, costs, workload, and payment status. Both projects include documented Power BI dashboard and visualization planning; interactive dashboard implementation remains a development area rather than a completed portfolio claim.

My Bank of Baroda analysis adds financial-services context: I used Excel and SQL to clean and examine customer transaction patterns, visualize trends, and present recommendations for engagement and service delivery. Earlier roles at Arihant Investment and Trans Globe Education strengthened my care with confidential records, coordination, and clear partner communication.

Canada Life's purpose of improving Canadians' financial, physical, and mental well-being makes the quality of operational analysis especially meaningful. I would bring disciplined SQL reasoning, careful validation, clear requirements, curiosity, and accountable follow-through while rapidly extending my implementation skills within Canada Life's Power BI and cloud environment.

Thank you for your time and consideration. I look forward to discussing how I could contribute to your team.

Best regards,
Jainali Mehta
