RE: Business Systems Analyst, CIBC

Dear Hiring Manager,

I am applying for the Business Systems Analyst position at CIBC. I completed a Master of Business Analytics at Edith Cowan University in Australia and now live in Toronto. My early-career foundation combines business and reporting requirements, process mapping, analytical solution support, SQL and Excel, data validation, Agile collaboration, and client-focused communication.

As a Data Intern at AYLA Solutions in Australia, I gathered and documented business and reporting requirements, clarified intended outputs, supported SQL-based extraction and validation, and prepared advanced Excel reports. I also contributed dashboard and reporting insights for performance tracking. Agile sprint planning and review sessions strengthened my ability to ask focused questions, communicate progress, maintain usable documentation, and connect analytical work to its intended business purpose.

My published projects show how I structure interconnected business information and translate questions into defined analytical outputs. In E-Commerce Sales Analytics, I modelled customers, products, orders, line items, and payments with relational keys and integrity rules; defined revenue and KPI logic; added repeatable validation; and documented Power BI requirements and recommendations. In Healthcare Patient & Hospital Analytics, I connected patient, clinician, appointment, treatment, billing, and claim processes, analyzed operational questions with CTEs and window functions, and documented dashboard planning and recommendations for decision support.

At Trans Globe Education, I maintained client documentation and coordinated application and process updates with students and institutions while supporting reporting, workflow management, research, and communication. At Arihant Investment, I handled confidential business records and supported daily client-facing operations. These experiences reinforced the importance of listening carefully, following through, protecting information, and keeping processes understandable for the people who depend on them.

I recognize that my experience is earlier-career than the three years of BSA project leadership requested, and I have not yet served as a solution-design SME or team mentor. I am nevertheless drawn to CIBC's client-first approach and its focus on connecting business requirements with strategic technology solutions. I would bring rigorous requirements thinking, reliable documentation, analytical problem-solving, humility, and accountability while learning CIBC's architecture and delivery standards.

Thank you for your time and consideration. I look forward to discussing how I could contribute to your team.

Best regards,
Jainali Mehta
