RE: Analyst, Business, Aecon

Dear Hiring Manager,

I am applying for the Analyst, Business position with Aecon. The AeconONE mandate—streamlining processes, improving data visibility, and supporting consistent project delivery—closely matches the kind of practical analytical work I want to build my career around. I completed a Master of Business Analytics at Edith Cowan University in Australia and now live in Toronto, with an early-career foundation in requirements, process documentation, SQL, data validation, and stakeholder communication.

At AYLA Solutions in Australia, I gathered and documented business and reporting requirements, supported SQL-based extraction and validation, prepared advanced Excel reports, and contributed dashboard insights for business performance tracking. Participating in Agile sprint planning and reviews strengthened my ability to clarify operational needs, communicate progress, and keep analytical work aligned through accurate documentation. This experience provides a relevant base for process discovery, workflow mapping, reporting support, and collaboration with project teams.

My published e-commerce, healthcare, and workforce projects demonstrate a disciplined path from operational questions to structured data and decision-ready findings. I built relational PostgreSQL models, defined integrity rules and KPIs, examined patterns with CTEs and window functions, and added repeatable validation and GitHub Actions checks. Each repository also includes AI-assisted interpretation grounded in verified SQL outputs and structured Power BI KPI and dashboard planning. The work reflects the attention to data logic, reliability, documentation, and responsible AI use that digital solutions require.

Earlier roles at Trans Globe Education and Arihant Investment developed my workflow coordination, reporting support, client communication, and careful handling of confidential records. Graduate study in Business Systems Analysis, Business Process Management, Enterprise Architecture, Databases and Business Intelligence, and Project Management strengthened my ability to connect a process need with data, documentation, and delivery considerations. I am ready to extend this verified foundation by building hands-on depth in Power Automate, Power Apps, Microsoft Fabric, and enterprise workflow support.

Aecon's emphasis on safety, accountability, continuous improvement, and solutions that support essential infrastructure is especially compelling to me. I would welcome the opportunity to contribute dependable analysis, rigorous validation, clear documentation, and an active-learning mindset to AeconONE. Thank you for your consideration; I look forward to discussing how I could contribute.

Best regards,
Jainali Mehta
