RE: FDM Consultant - Data & Analytics, FDM

Dear Hiring Manager,

I am applying for the FDM Consultant – Data & Analytics opportunity. FDM's combination of structured technical coaching, practice-based learning, and client assignments is particularly compelling because it offers a disciplined path from analytical foundations to dependable delivery in varied business environments. I completed a Master of Business Analytics at Edith Cowan University in Australia and now live in Toronto.

At AYLA Solutions in Australia, I gathered and documented business and reporting requirements, supported SQL-based extraction and validation, prepared advanced Excel reports, and contributed dashboard insights for business performance tracking. Participating in Agile sprint planning and reviews strengthened my ability to clarify needs, communicate progress, and maintain useful analytical documentation. These habits would help me learn quickly, work reliably with FDM coaches, and adapt to the expectations of different client teams.

My published e-commerce, healthcare, and workforce projects show how I move from a business question to structured data, validated analysis, and a clear recommendation. I built relational PostgreSQL models, defined integrity rules and KPIs, analyzed patterns with joins, CTEs, segmentation, rankings, and window functions, and added repeatable validation and GitHub Actions checks. Each repository includes AI-assisted interpretation grounded in verified SQL outputs, together with Power BI KPI and dashboard planning. A separate Bank of Baroda project applied Excel and SQL to transaction trends and customer-service recommendations.

Earlier roles at Trans Globe Education and Arihant Investment developed my client communication, workflow coordination, reporting support, and care with confidential records. Alongside graduate coursework in Databases and Business Intelligence, Machine Learning, Analytics and Business Decision Making, Business Systems Analysis, and Project Management, these experiences have prepared me to explain findings clearly, receive feedback constructively, and contribute across business and technical contexts.

I am especially interested in FDM's Data Analyst and BI pathways while remaining open to the broader technical skills your training and client demand may require. I would bring curiosity, disciplined problem solving, validated analytical work, and a genuine commitment to learning. Thank you for your consideration; I look forward to discussing my fit for the consultant programme.

Best regards,
Jainali Mehta
