RE: Data Analyst (Open to New Grads), SHEIN

Dear Hiring Manager,

I am applying for the Data Analyst (Open to New Grads) position with SHEIN in Vaughan. SHEIN's on-demand retail model makes reliable operational data, clear performance metrics, and timely analysis especially important to inventory, logistics, and customer outcomes. I completed a Master of Business Analytics at Edith Cowan University in Australia and now live in Toronto, with an early-career foundation in PostgreSQL, SQL, advanced Excel, reporting requirements, and data validation.

At AYLA Solutions in Australia, I gathered and documented business and reporting requirements, supported SQL-based extraction and validation, prepared advanced Excel reports, and contributed dashboard insights for business performance tracking. Participating in Agile sprint planning and reviews strengthened my ability to clarify operational needs, communicate progress, and maintain accurate analytical documentation. Those habits support recurring reporting and cross-departmental work in fast-moving operations.

My E-Commerce Sales Analytics project is particularly relevant to this role. I modelled customers, products, orders, line items, and payments; defined recognized revenue to exclude pending, refunded, and cancelled activity; and analyzed spend, order frequency, product rankings, monthly revenue, and payment methods. I used integrity rules and repeatable validation so the resulting KPIs had a defensible data foundation. My healthcare project extended this approach to completion, treatment-cost, billing, workload, and claims analysis using CTEs and window functions.

Across my three published repositories, I also documented AI-assisted recommendations grounded in verified SQL findings and completed Power BI KPI and dashboard planning. Earlier roles at Trans Globe Education and Arihant Investment developed my workflow coordination, document management, client communication, and care with confidential records. Graduate coursework in Supply Chain Analytics, Databases and Business Intelligence, Business Process Management, and Project Management further strengthened my ability to connect operational challenges with structured analysis.

I would bring disciplined problem solving, reliable reporting, clear communication, and an active-learning mindset while building deeper expertise in logistics, customs processes, budgeting, and Python. SHEIN's scale and focus on an agile, waste-conscious supply chain make this an exciting environment in which to grow and contribute. Thank you for your consideration; I look forward to discussing how I could support the team.

Best regards,
Jainali Mehta
