RE: Business Analyst, Vretta

Dear Hiring Manager,

I am applying for the Business Analyst position with Vretta. The opportunity to connect client needs, data, and product decisions in service of better assessment and learning outcomes is especially meaningful to me. I completed a Master of Business Analytics at Edith Cowan University in Australia and now live in Toronto, bringing an early-career foundation in requirements gathering, process documentation, SQL, advanced Excel, data validation, and stakeholder communication.

At AYLA Solutions in Australia, I gathered and documented business and reporting requirements, supported SQL-based extraction and validation, prepared advanced Excel reports, and contributed dashboard insights for business performance tracking. Participating in Agile sprint planning and reviews strengthened my ability to clarify operational needs, communicate progress, and keep analytical work aligned through accurate documentation. This experience directly supports Vretta's need to structure stakeholder requests and turn them into measurable inputs for planning and reporting.

My published e-commerce, healthcare, and workforce projects show how I move from a business question to structured data, validated metrics, and actionable recommendations. I built relational PostgreSQL models, defined integrity rules and KPIs, analyzed patterns with CTEs and window functions, and added repeatable validation and GitHub Actions checks. Each repository includes AI-assisted interpretation grounded in verified SQL outputs and structured Power BI KPI and dashboard planning. This work has trained me to make definitions explicit, test evidence, and communicate what a metric can and cannot support.

My earlier role at Trans Globe Education adds a relevant education-sector perspective: I managed client documentation, maintained accurate records, and coordinated application and process updates with students and institutions. I also designed a Google Forms study of online GST filing adoption and used Excel to identify user patterns and barriers, translating responses into documented recommendations. Together, these experiences strengthened my client focus, organization, and sensitivity to how users experience processes and technology.

Vretta's mission to modernize assessment and learning systems makes this more than a general analyst opportunity. I would welcome the chance to contribute clear requirements, dependable analysis, transparent reporting, and thoughtful partner communication while learning the product domain deeply. Thank you for your consideration; I look forward to discussing how I could support Vretta's clients and product teams.

Best regards,
Jainali Mehta
