**RE: Business Analyst, Management Consulting (New Grad 2026), BDO**

Dear Hiring Manager,

I am applying for BDO's Business Analyst, Management Consulting (New Grad 2026) position. I completed a Master of Business Analytics at Edith Cowan University in Australia and now live in Toronto. The opportunity to combine business-first problem solving, research, data, and responsible applications of AI for practical client transformation closely matches both my training and the consulting career I want to build.

As a Data Intern at AYLA Solutions in Australia, I gathered and documented business and reporting requirements, supported SQL-based extraction and validation, prepared advanced Excel reports, and contributed dashboard insights for performance tracking. Agile planning and review sessions strengthened my ability to clarify operational needs, organize analysis, communicate progress, and maintain accurate documentation. This experience taught me that useful analysis begins with a well-defined business question and ends with an output stakeholders can understand and use.

A separate research project demonstrates my ability to move from an open question to structured evidence. I designed a Google Forms survey, organized and analyzed responses in Excel using formulas, filters, pivot tables, percentages, and charts, identified adoption patterns and barriers, and documented practical recommendations. At Trans Globe Education, I also supported market research, reporting, client communication, and workflow coordination while keeping students and institutions informed about process updates. Together, these experiences developed my curiosity, service mindset, and ability to connect qualitative context with quantitative findings.

My published e-commerce, healthcare, and workforce repositories add cross-domain evidence of structured problem solving. I modelled connected data, translated business definitions into integrity and KPI logic, analyzed operational patterns with SQL, and documented findings and recommendations supported by repeatable validation. I also used AI to assist interpretation while grounding conclusions in verified SQL outputs, and created Power BI KPI and dashboard plans that connect business questions with future reporting needs. This work gives me a practical foundation for discussing where data and AI can improve decisions without overstating implementation status.

BDO's combination of client service, integrity, collaboration, digital strategy, and continuous learning is especially compelling to me. I would bring disciplined analysis, clear writing, careful documentation, intellectual curiosity, and the humility to learn from experienced consultants while contributing dependable work from the beginning. I would welcome the opportunity to help your team research complex problems, structure evidence, and develop practical digital-transformation recommendations for Canadian organizations.

Thank you for your time and consideration. I look forward to discussing how my analytical foundation and business-first mindset could contribute to BDO's Digital Strategy & Transformation practice.

Best regards,  
Jainali Mehta
