RE: Business Analyst - New Grad, Business Applications, BDO

Dear Hiring Manager,

I am applying for the Business Analyst – New Grad position with BDO Digital's Business Applications team. I completed a Master of Business Analytics at Edith Cowan University in Australia and now live in Toronto. The opportunity to understand client requirements and help translate them into practical finance, workforce, supply-chain, and customer-management solutions closely matches the business-systems career I want to build.

As a Data Intern at AYLA Solutions in Australia, I gathered and documented business and reporting requirements, supported SQL-based extraction and validation, prepared advanced Excel reports, and contributed dashboard insights for performance tracking. Participating in Agile planning and review sessions strengthened my ability to clarify operational needs, communicate progress, and maintain accurate documentation. This experience gave me a practical foundation in asking what information a business needs, translating definitions into analytical logic, and checking that outputs remain dependable.

My portfolio provides relevant exposure to several domains named in the posting. For e-commerce analytics, I modelled customers, products, orders, line items, and payments, then converted primary-key, foreign-key, uniqueness, value, and revenue definitions into testable business rules. My workforce project connects employees, compensation, performance, attendance, hiring, and tenure, while a Bank of Baroda project used Excel and SQL to clean customer data, identify trends, and document recommendations. These projects strengthened my ability to understand connected processes and data before proposing a solution.

Earlier roles at Trans Globe Education and Arihant Investment developed my client communication, process-update coordination, confidential record handling, and attention to data accuracy. Graduate coursework in Business Systems Analysis, Business Process Management, Databases and Business Intelligence, Enterprise Architecture, and Project Management further strengthened my understanding of how people, processes, information, and technology must align. Across my published repositories, I also added repeatable validation, SQL-grounded AI-assisted findings, and Power BI reporting plans.

My experience to date is in analysis, requirements, and solution planning rather than production configuration of Microsoft, Oracle, Salesforce, or Dayforce applications or leading executive workshops. I would bring learning agility, disciplined documentation, relationship-minded communication, and the humility to learn each platform and BDO delivery method carefully. BDO's emphasis on integrity, respect, collaboration, genuine care, purposeful client work, and professional development makes it an environment where I believe I could contribute dependable work while growing into a trusted implementation advisor.

Thank you for your consideration. I look forward to discussing how I could contribute my analytical foundation, business-process perspective, and client-service commitment to BDO Digital.

Best regards,
Jainali Mehta
