RE: Personal and Business Banking Development Program, BMO

Dear Hiring Manager,

I am applying for BMO's Personal and Business Banking Development Program. I completed a Master of Business Analytics at Edith Cowan University in Australia and now live in Toronto. The program's combination of Product Management, Risk Management, Data & Analytics, and Collections is especially compelling because it connects analytical work with customer financial progress, disciplined decision-making, and a structured opportunity to understand how a major Canadian banking business operates.

As a Data Intern at AYLA Solutions in Australia, I gathered and documented business and reporting requirements, supported SQL-based extraction and validation, prepared advanced Excel reports, and contributed dashboard insights for performance tracking. Agile planning and review sessions strengthened my ability to clarify operational needs, organize analysis, communicate progress, and maintain accurate documentation. This experience developed the disciplined reporting and data-quality habits needed to support fact-based decisions.

A Bank of Baroda project provides direct exposure to financial-services customer analysis: I used Excel and SQL to clean customer data, identify patterns and trends, and document recommendations. My e-commerce repository adds a richer customer, product, transaction, and payment model. I defined recognized-revenue and integrity rules and analyzed spend, order frequency, product rankings, monthly revenue, and payment methods before documenting validated recommendations. These projects strengthened my ability to connect customer behaviour and transactional data with clear business questions.

My healthcare repository models billing and claims and uses CTEs, rankings, running totals, and lag comparisons to analyze operational patterns. A separate Google Forms research project developed my market-research and Excel-analysis skills. Across projects, I added repeatable validation, GitHub Actions checks, SQL-grounded AI-assisted findings, and Power BI KPI and dashboard plans. Earlier roles at Trans Globe Education and Arihant Investment strengthened my client communication, workflow coordination, confidential record handling, and attention to accuracy.

I have not yet owned banking products, lending-risk controls, collections models, user acceptance testing, or production dashboards, and I would not overstate that experience. I would bring strong SQL and Excel foundations, a careful approach to data quality, business curiosity, and the humility to learn each rotation's products, risks, processes, and measures. BMO's emphasis on customer progress, innovation, collaboration, coaching, and cross-functional development makes this an outstanding environment in which to contribute and grow as an early-career analyst.

Thank you for your consideration. I look forward to discussing how my analytical discipline, financial-services interest, and learning agility could contribute to BMO's Personal and Business Banking team.

Best regards,
Jainali Mehta
