RE: Contract Operations Analyst, PointClickCare

Dear Hiring Manager,

I am applying for PointClickCare's contract operations opportunity. I completed a Master of Business Analytics at Edith Cowan University in Australia and now live in Toronto. The role's focus on accurate records, data validation, disciplined execution, and responsible use of technology closely matches the foundation I have built through data analysis and operational-support work.

As a Data Intern at AYLA Solutions in Australia, I gathered and documented business and reporting requirements, supported SQL-based extraction and validation, prepared advanced Excel reports, and contributed dashboard insights for performance tracking. Participating in Agile planning and review sessions strengthened my ability to clarify needs, organize work, communicate progress, and maintain accurate analytical documentation while priorities moved forward.

My published analytics portfolio demonstrates the quality-control mindset I would bring to contractual data. In the e-commerce project, I linked five related business entities using primary-key, foreign-key, uniqueness, and value checks, then defined recognized-revenue rules that exclude pending, refunded, and cancelled activity. My healthcare project connects patient, clinician, appointment, treatment, billing, and claims data for operational analysis. Across the repositories, I added repeatable validation and GitHub Actions checks, used AI to assist interpretation, and verified findings against the underlying SQL outputs. This combination of structured checks and human review reflects the responsible AI discipline PointClickCare describes.

Earlier roles at Trans Globe Education and Arihant Investment developed directly relevant habits: maintaining accurate client documentation, coordinating process updates, supporting reporting and workflows, handling data entry, and protecting confidential records. I learned to follow through on operational tasks, communicate clearly with clients and institutions, and keep information dependable and organized. These are the same habits I would apply when reviewing records, identifying missing information, escalating discrepancies, and supporting searchable, consistent contract data.

I have not yet worked directly in a CLM or CRM platform or interpreted legal contract terms, and I would not overstate that experience. I offer strong learning agility, technology aptitude, careful record handling, and verified data-validation experience, supported by graduate coursework in Business Systems Analysis, Databases and Business Intelligence, Business Process Management, and Project Management. PointClickCare's healthcare mission and emphasis on precision, accountability, confidentiality, and continuous improvement make this an especially meaningful opportunity to apply that foundation and grow quickly.

Thank you for considering my application. I would welcome the opportunity to discuss how my accuracy, analytical discipline, responsible use of AI, and service-oriented approach could support PointClickCare's contract operations team.

Best regards,
Jainali Mehta
