RE: Product Operations and Implementation Analyst, Unknown Company

Dear Hiring Manager,

I am applying for the Product Operations and Implementation Analyst position. Although the company name was not included in the posting, the opportunity to support product planning, implementation workstreams, requirements, timelines, and cross-functional coordination is compelling. I completed a Master of Business Analytics at Edith Cowan University in Australia and now live in Toronto, bringing an early-career foundation in requirements, documentation, analytical reporting, and organized follow-through.

At AYLA Solutions in Australia, I gathered and documented business and reporting requirements, supported SQL-based extraction and validation, prepared advanced Excel reports, and contributed dashboard insights for business performance tracking. Participating in Agile sprint planning and reviews strengthened my ability to clarify operational needs, communicate progress, and maintain accurate analytical documentation. These habits provide a relevant base for supporting requirements, plans, timelines, status updates, and coordinated delivery.

My published e-commerce, healthcare, and workforce projects demonstrate structured planning from a defined question through data modelling, validation, analysis, and recommendations. I established integrity rules and KPIs, used CTEs and window functions to identify operational patterns, and added repeatable validation and GitHub Actions checks. Each repository contains documented AI-assisted recommendations grounded in verified SQL findings and Power BI KPI and dashboard planning. This work has strengthened my attention to dependencies, exceptions, evidence, and clear documentation.

At Arihant Investment in India, I supported daily investment-office operations, client communication, and accurate confidential records. This experience, together with my NISM Series XII Securities Markets Foundation credential, gives me limited but genuine familiarity with a financial-services setting. I do not yet have the required mutual-fund product implementation experience; I would bring a disciplined learning approach to fund structures, product governance, regulatory dependencies, and event workflows while being candid about that gap.

Graduate coursework in Project Management, Enterprise Architecture, Business Systems Analysis, and Business Process Management further supports my ability to connect requirements, stakeholders, delivery considerations, and post-project learning. I would welcome the opportunity to contribute precise documentation, dependable coordination, careful analysis, and an active-learning mindset. Thank you for your consideration; I look forward to discussing how I could support the Product Operations and Implementation team.

Best regards,
Jainali Mehta
