RE: Product Business Analyst, Patient Services — Fall 2026, McKesson

Dear Hiring Manager,

I am applying for the Patient Services Product Business Analyst position in McKesson Canada Specialty Health's Fall 2026 Intern Program, requisition JR0149817. I completed a Master of Business Analytics at Edith Cowan University in Australia and now live in Toronto. My foundation combines Australian Data Intern experience with requirements gathering, process analysis, Agile participation, SQL and Excel reporting, data validation, documentation, and AI-assisted analytical recommendations.

At AYLA Solutions in Australia, I gathered and documented business and reporting requirements, supported SQL extraction and validation, prepared advanced Excel reports, and contributed performance insights. Participating in Agile planning and review sessions strengthened my ability to clarify needs, organize analytical work, communicate progress, and maintain documentation that others can follow. These habits align with McKesson's need for thoughtful requirements, process artifacts, and cross-functional delivery support.

My Healthcare Patient & Hospital Analytics project demonstrates focused interest in healthcare operations and patient-related data. I modelled patients, clinicians, appointments, treatments, billing, and insurance claims; analyzed appointment completion, costs, billing status, clinician workload, and claims; and added automated validation and GitHub Actions checks. I then documented AI-assisted operational insights, recommendations, KPIs, and Power BI dashboard plans grounded in the validated SQL results.

Earlier roles at Trans Globe Education and Arihant Investment developed my process coordination, client communication, confidential record handling, and attention to accuracy. Coursework in Business Systems Analysis, Business Process Management, Analytics and Business Decision Making, Project Management, and Enterprise Architecture strengthened my understanding of process flows, stakeholder needs, systems, and structured problem-solving across complex workflows.

I am drawn to McKesson's patient-services mission and the opportunity to support digital solutions that improve access to therapy. Formal user stories, acceptance criteria, UAT scripts, Salesforce, and product-discovery workshops would be new areas for me, but my requirements, validation, Agile, process, and healthcare-analytics foundation gives me a strong base to learn them responsibly. I would bring curiosity, careful documentation, and a patient-centred learning mindset to the Product Innovation team.

Thank you for your consideration. I would welcome the opportunity to discuss how my analytical foundation and disciplined approach could contribute during McKesson's Fall 2026 work term.

Best regards,
Jainali Mehta
