RE: AI Research Contributor, Mercor

Dear Hiring Manager,

I am applying for the AI Research Contributor opportunity with Mercor. I recently completed a Master of Business Analytics at Edith Cowan University in Australia and now live in Toronto. My interdisciplinary academic background also includes an Integrated Master of Business Administration from Atmiya University in India. I offer a practical combination of research design, structured writing, quantitative and qualitative analysis, information validation, and documented AI-assisted reasoning. I also meet the project's hardware requirement with an Apple M3 MacBook Pro running macOS 26.6.2.

At AYLA Solutions in Australia, I gathered and documented business and reporting requirements, supported SQL-based extraction and validation, prepared advanced Excel reports, and contributed evidence-based performance insights. Participating in Agile planning and review sessions strengthened my ability to clarify a question, organize analytical work, communicate progress, and maintain documentation that another person can follow. These habits support consistent research questions, answers, and evaluation.

My research and portfolio work demonstrates both range and evidence discipline. For an online GST-filing study, I designed a Google Forms survey, analyzed responses in Excel, identified adoption patterns and barriers, and documented findings and recommendations. In my published e-commerce and healthcare repositories, I developed structured prompts and completed Generative AI-assisted interpretation based on validated SQL results. I also added repeatable data checks and GitHub Actions workflows, helping ensure that conclusions remained connected to reproducible analytical evidence.

Earlier roles at Trans Globe Education and Arihant Investment developed my online research, administrative reporting, written follow-up, client communication, and attention to information accuracy. Coursework in Machine Learning, Analytics and Business Decision Making, Databases and Business Intelligence, Business Systems Analysis, and Enterprise Architecture strengthened my ability to approach questions across technical and business contexts.

Formal language-model benchmarking would be a new professional setting for me, so I would approach the paid assessment with care rather than overstating prior experience. My method would be to define the question precisely, research across relevant sources, distinguish evidence from inference, write a concise answer, verify consistency and edge cases, and apply evaluation criteria uniformly. Mercor's flexible research project is compelling because it combines independent work with rigorous reasoning and clear written communication.

Thank you for considering my application. I would welcome the opportunity to demonstrate my research, reasoning, and written-communication skills through Mercor's interview and assessment process.

Best regards,
Jainali Mehta
