RE: Junior Data Analyst, SureWerx

Dear Hiring Manager,

I am applying for the Junior Data Analyst position with SureWerx, reference P-0246. I completed a Master of Business Analytics at Edith Cowan University in Australia and now live in Toronto, aligning with the role's GTA preference. My foundation combines Data Intern experience with PostgreSQL, SQL, advanced Excel, relational modelling, requirements documentation, validation, and Power BI dashboard planning.

At AYLA Solutions in Australia, I gathered and documented business and reporting requirements, supported SQL-based extraction and validation, prepared advanced Excel reports, and contributed insights for performance tracking. Participating in Agile planning and review sessions strengthened my ability to clarify reporting needs, organize analytical work, communicate progress, and maintain documentation for shared use.

My published analytics portfolio demonstrates hands-on data preparation and quality work across e-commerce, healthcare, and workforce domains. I built relational PostgreSQL models with keys, constraints, and checks; wrote SQL using joins, CTEs, rankings, segmentation, running totals, lag comparisons, and window functions; and added repeatable validation and GitHub Actions checks. Each project includes completed AI-assisted interpretation grounded in validated SQL outputs, plus structured Power BI KPI, visualization, and dashboard planning aligned with decision-focused reporting requirements.

Earlier roles at Trans Globe Education and Arihant Investment developed my documentation discipline, workflow support, client communication, and attention to data accuracy and confidentiality. Coursework in Databases and Business Intelligence, Business Systems Analysis, Machine Learning, and Enterprise Architecture further strengthened my understanding of how data structures, technical systems, and business requirements connect.

SureWerx appeals to me because this role connects operational data, reporting, continuous improvement, and user support within a growing international safety-products organization. My verified Power BI experience currently centres on KPI definitions, visualization requirements, and dashboard planning rather than published interactive dashboards. I would bring strong SQL and validation habits, transparent communication, and the motivation to deepen hands-on Power BI while learning Fabric, Copilot, integrations, testing, and SureWerx's reporting environment from senior analysts.

Thank you for your consideration. I would welcome the opportunity to discuss how my analytical foundation, documentation discipline, and learning mindset could support SureWerx's IT team.

Best regards,
Jainali Mehta
