RE: Business Operations Coordinator, Confidential Employer

Dear Hiring Manager,

I am applying for the Business Operations Coordinator position advertised for Toronto. I completed a Master of Business Analytics at Edith Cowan University in Australia and now live in Toronto. My background combines operations and workflow support, accurate documentation, advanced Excel reporting, stakeholder communication, and an early-career analytical foundation. I am particularly interested in the role's focus on converting plans into organized execution and keeping work moving through clear follow-up.

At AYLA Solutions in Australia, I gathered and documented business and reporting requirements, supported SQL-based extraction and validation, prepared advanced Excel reports, and contributed performance-tracking insights. Participating in Agile sprint planning and review sessions strengthened my ability to clarify requirements, organize work, communicate progress, and maintain documentation that others can use. That disciplined approach transfers directly to maintaining project information, identifying incomplete inputs, and escalating issues with clear context.

At Trans Globe Education, I managed accurate client documentation and coordinated application and process updates between students and institutions. I also supported administrative reporting, workflow management, client communication, and market research. This experience required structured follow-up, careful records, and concise communication across external parties. Earlier, at Arihant Investment, I handled data entry, confidential records, daily operational support, and client communication, reinforcing the reliability and attention to detail needed in a coordination role.

My published analytics projects further demonstrate how I bring structure to complex information. Across e-commerce, healthcare, and workforce datasets, I built relational models, defined operational measures, and added repeatable validation and GitHub Actions checks. Graduate coursework in Project Management, Business Process Management, Business Systems Analysis, and Enterprise Architecture strengthened my understanding of dependencies, process design, documentation, and controlled execution.

I am drawn to this opportunity because success is defined through dependable follow-through, structured communication, and predictable operations. I would welcome the opportunity to support the Operations Manager and broader team with organized documentation, accurate reporting, thoughtful follow-ups, and a proactive learning mindset in the fully in-office environment.

Thank you for your time and consideration. I look forward to discussing how I could contribute to your team.

Best regards,
Jainali Mehta
