RE: Data Analyst, College of Nurses of Ontario

Dear Hiring Manager,

I am applying for the Data Analyst position with the College of Nurses of Ontario. I completed a Master of Business Analytics at Edith Cowan University in Australia and now live in Toronto. CNO's commitment to evidence-based decisions in support of safe nursing practice gives this analytical work a clear public purpose. My strongest contribution would be a foundation in PostgreSQL, SQL, advanced Excel, reporting requirements, data validation, KPI design, Power BI dashboard planning, and careful communication.

At AYLA Solutions in Australia, I gathered and documented business and reporting requirements, supported SQL-based extraction and validation, prepared advanced Excel reports, and contributed dashboard and reporting insights for performance tracking. Agile planning and review sessions strengthened my ability to clarify an analytical request, confirm expected outputs, communicate progress, and maintain documentation that another team member could follow.

My Healthcare Patient & Hospital Analytics project is particularly relevant to CNO's environment. I modelled patients, clinicians, appointments, treatments, billing, and insurance claims, then used CTEs and window functions to examine appointment completion, costs, billing status, clinician workload, and claims. Automated validation and GitHub Actions supported repeatable quality checks, while AI-assisted recommendations and Power BI planning translated validated outputs into decision-focused reporting requirements.

Across my e-commerce and workforce projects, I organized diverse relational data, defined business rules, created repeatable queries, analyzed trends and segments, and documented meaningful findings. Earlier roles at Trans Globe Education and Arihant Investment strengthened my information-request coordination, client communication, record accuracy, and confidentiality. Those responsibilities taught me to clarify before acting and to share information only through appropriate processes—an important mindset when analytics involves sensitive records and system partners.

I would also be transparent about my current gaps. My verified experience is centered on SQL, PostgreSQL, Excel, and Power BI dashboard planning; I have not yet used the posting's statistical programming packages in a professional role, and my portfolio does not yet contain published interactive Power BI dashboards. I would address that gap through CNO's approved tools and standards, peer review, reproducible analysis, and systematic testing rather than overstating readiness. My record of learning across databases, machine learning, analytics, and business systems gives me confidence in that development path.

Thank you for considering my application. I would welcome the opportunity to discuss how my analytical discipline, integrity, curiosity, and collaborative approach could support CNO's Analytics team.

Best regards,
Jainali Mehta
