RE: Junior Business Analyst, Confidential Client

Dear Hiring Manager,

I am applying for the Junior Business Analyst position supporting SAP Finance. I completed a Master of Business Analytics at Edith Cowan University in Australia and now live in Toronto. My early-career foundation combines business and reporting requirements, process documentation, SQL, advanced Excel, data validation, financial and KPI analysis, and stakeholder communication. I am particularly interested in work that connects business processes, system requirements, testing discipline, and implementation support.

At AYLA Solutions in Australia, I gathered and documented business and reporting requirements, supported SQL-based extraction and validation, prepared advanced Excel reports, and contributed performance-tracking insights. Participating in Agile planning and reviews strengthened my ability to clarify expected outputs, communicate progress, and keep analytical documentation current for review and handoff.

My E-Commerce Sales Analytics project demonstrates finance-adjacent process and control thinking. I modelled orders, line items, and payments; defined recognized-revenue rules that exclude pending, refunded, and cancelled activity; analyzed monthly revenue and payment methods; and added repeatable validation and GitHub Actions checks. A Bank of Baroda academic project involved cleaning and analyzing customer transactions in SQL and Excel, while my online GST filing research required process-focused survey design, Excel analysis, and documented recommendations for small-business adoption.

Earlier roles at Trans Globe Education and Arihant Investment developed my workflow coordination, reporting support, process-update communication, confidential record handling, and attention to accuracy. Coursework in Business Systems Analysis, Business Process Management, Project Management, Enterprise Architecture, and Databases and Business Intelligence further strengthened my ability to examine how operational needs connect with systems and documentation.

My verified experience does not yet include hands-on SAP FI/CO, S/4HANA, Fiori, or SAP implementation support. I am therefore approaching this opportunity as an early-career analyst with transferable requirements, process, validation, financial-analysis, and documentation skills and a clear commitment to building SAP Finance capability through structured learning, approved process repositories, traceable requirements, test evidence, and review with experienced functional and technical colleagues.

Thank you for considering my application. I would welcome the opportunity to discuss how my analytical discipline, business-process foundation, and careful communication could support your project team.

Best regards,
Jainali Mehta
