RE: Data Consultant, Audit Technologies Group, KPMG in Canada

Dear Hiring Manager,

I am applying for the Data Consultant opportunity within KPMG Canada's Audit Technologies Group. I completed a Master of Business Analytics at Edith Cowan University in Australia and now live in Toronto. KPMG's technology-first, people-driven approach and the group's role in strengthening audit delivery through data are compelling to me. I would bring an early-career foundation in PostgreSQL, SQL, advanced Excel, data extraction and validation, requirements documentation, reporting, and stakeholder communication.

At AYLA Solutions in Australia, I gathered and documented business and reporting requirements, supported SQL-based extraction and validation, prepared advanced Excel reports, and contributed performance-tracking insights. Participating in Agile planning and review sessions strengthened my ability to clarify the analytical need, communicate progress, and maintain accurate documentation that supports review and handoff. These habits support disciplined scoping, issue communication, and reviewable D&A documentation.

My E-Commerce Sales Analytics project demonstrates the control mindset I would bring to audit-related data work. I modelled customers, products, orders, line items, and payments; implemented relational keys, uniqueness rules, and checks; and defined recognized revenue to exclude pending, refunded, and cancelled activity. Repeatable validation and GitHub Actions helped make the work reviewable. In a Bank of Baroda project, I used Excel and SQL to clean and analyze customer transactions and presented recommendations. My Healthcare Patient & Hospital Analytics project adds experience with complex relational data, CTEs, window functions, automated validation, and decision-focused reporting plans.

Earlier roles at Trans Globe Education and Arihant Investment strengthened my external-stakeholder communication, workflow coordination, confidential record handling, and client service. My Integrated Master of Business Administration, NISM securities-markets credential, and financial-services project work provide a useful business and finance context alongside my analytical training.

I would be transparent about the platform learning curve. My verified hands-on stack is SQL, PostgreSQL, Excel, Git/GitHub Actions, and Power BI dashboard planning; I have not yet supported external-audit ERP extractions or worked hands-on with Alteryx, Databricks, Python, APIs, VBA, or Power Platform. I would approach those tools through KPMG's approved methods, supervised practice, reconciliation to source data, peer review, and clear issue escalation rather than overstating readiness. My record of learning and my respect for evidence support that development path.

Thank you for considering my application. I would welcome the opportunity to discuss how my analytical discipline, integrity, learning mindset, and collaborative approach could support high-quality, technology-enabled audit delivery at KPMG.

Best regards,
Jainali Mehta
