RE: Junior Project Coordinator, INVIRO

Dear Hiring Manager,

I am applying for the Junior Project Coordinator position with INVIRO. I completed a Master of Business Analytics at Edith Cowan University in Australia and now live in Toronto. INVIRO's close-knit environment, multidisciplinary project work, and commitment to employee development appeal to me. I would bring an early-career foundation in requirements, project documentation, progress communication, advanced Excel reporting, workflow coordination, and client support.

At AYLA Solutions in Australia, I gathered and documented business and reporting requirements, supported SQL-based extraction and validation, prepared advanced Excel reports, and contributed performance-tracking insights. Participating in Agile sprint planning and review sessions strengthened my ability to clarify inputs, maintain accurate documentation, communicate progress, and support work through a structured delivery cycle. These are practical foundations for tracking milestones, action items, and project correspondence while supporting Project Managers.

Earlier, as a Support Executive at Trans Globe Education, I coordinated process updates with students and institutions, maintained accurate client records, and supported reporting, workflow management, market research, and client communication. At Arihant Investment, I handled data entry, documentation, confidential records, and daily operational support. Together, these roles taught me to follow up professionally, keep information organized, and recognize how incomplete records or delayed updates can affect downstream work.

My projects reinforce that discipline. I structured e-commerce and healthcare data, documented business rules and measures, used Git for version control, and added repeatable validation and GitHub Actions checks. In Online GST Filing Adoption Research, I planned and conducted a Google Forms study, organized responses in Excel, and documented findings and recommendations. Coursework in Project Management, Business Systems Analysis, Business Process Management, Enterprise Architecture, and Supply Chain Analytics further developed my understanding of scope, stakeholders, processes, and coordinated delivery.

My background is outside consulting engineering, and I have not yet administered construction change orders or used platforms such as Microsoft Project, Procore, AutoCAD, Revit, or Bluebeam. I would approach that learning curve systematically: study INVIRO's procedures and terminology, keep controlled logs and files, verify responsibilities and deadlines, raise risks with evidence, and obtain technical review rather than making unsupported assumptions. I can contribute immediately through documentation, Excel-based tracking, follow-up, quality-minded checking, and responsive service while learning the ICI project environment.

Thank you for considering my application. I would welcome the opportunity to discuss how my coordination foundation, analytical discipline, and commitment to accurate execution could support INVIRO's Project Managers and clients.

Best regards,
Jainali Mehta
