RE: Data Prioritization Analyst, RBC

Dear Hiring Manager,

I am applying for the Data Prioritization Analyst position with RBC. I completed a Master of Business Analytics at Edith Cowan University in Australia and now live in Toronto. My background combines an Australian Data Intern foundation with business and reporting requirements, data validation, structured documentation, PostgreSQL, SQL, advanced Excel, and careful stakeholder communication.

At AYLA Solutions in Australia, I gathered and documented business and reporting requirements, supported SQL-based extraction and validation, prepared advanced Excel reports, and contributed dashboard and reporting insights for performance tracking. Participating in Agile planning and review sessions taught me to clarify the business need, organize analytical work, communicate progress, incorporate feedback, and maintain documentation that others could follow. These habits are directly relevant to identifying important information, documenting its business use, and coordinating with report and process stakeholders.

My analytical projects show a practical approach to data structure and quality. In E-Commerce Sales Analytics, I modelled connected customer, product, order, line-item, and payment data; applied primary-key, foreign-key, uniqueness, and value checks; and defined recognized-revenue logic before analyzing the results. Repeatable validation and GitHub Actions checks reinforced the importance of clear definitions and reliable controls. In a Bank of Baroda study, I used Excel and SQL to clean and analyze customer transactions and documented recommendations, giving me an early foundation in financial-data analysis.

Earlier roles at Trans Globe Education and Arihant Investment strengthened my information capture, reporting support, workflow coordination, confidential record handling, and written and verbal communication. My Integrated Master of Business Administration and NISM Series XII Securities Markets Foundation credential also provide a useful business and financial-services base. Graduate coursework in Business Systems Analysis, Databases and Business Intelligence, Business Process Management, Enterprise Architecture, and Project Management strengthened my ability to connect processes, data, controls, and documentation.

I am drawn to RBC because the Data Prioritization Team connects business processes, critical data, metadata, documentation, and data quality across risk, finance, liquidity, and regulatory reporting. Although Collibra, formal CDE methodology, and regulatory frameworks would be new areas for me, I bring the analytical discipline, documentation habits, attention to detail, and active-learning mindset to develop those capabilities responsibly. I would welcome the opportunity to contribute dependable analysis while learning RBC's governance standards from experienced colleagues.

Thank you for your time and consideration. I look forward to discussing how I could contribute to your team.

Best regards,
Jainali Mehta
