RE: Data Analyst, Confidential Upwork Client

Dear Hiring Manager,

I am applying for the remote Data Analyst contract advertised on Upwork. I completed a Master of Business Analytics at Edith Cowan University in Australia and now live in Toronto. My strongest alignment is transforming and interpreting business data using PostgreSQL, SQL, and advanced Excel, then converting the results into validated KPIs, reporting insights, and clear recommendations. My published GitHub portfolio provides visible examples across sales, healthcare, and workforce data.

At AYLA Solutions in Australia, I gathered and documented business and reporting requirements, supported SQL-based extraction and validation, prepared advanced Excel reports, and contributed dashboard and reporting insights for business performance tracking. Working through Agile planning and reviews strengthened my ability to clarify the question behind a request, organize inputs and expected outputs, communicate progress, and maintain current documentation.

My E-Commerce Sales Analytics project connects customers, products, orders, line items, and payments. I defined recognized-revenue rules, analyzed monthly revenue, customer spend, order frequency, product rankings, and payment methods, and added repeatable validation and GitHub Actions checks. Healthcare Patient & Hospital Analytics uses CTEs and window functions for segmentation, rankings, running totals, lag comparisons, and operational measures. HR Analytics extends this work to departmental headcount, compensation, performance, attendance, hiring, and tenure.

Across these repositories, I documented KPI and Power BI dashboard plans and completed AI-assisted interpretation grounded in validated SQL outputs. Interactive Power BI dashboards are not yet published, so I represent that experience accurately as dashboard planning. Earlier roles at Trans Globe Education and Arihant Investment also developed my reporting support, workflow coordination, client communication, and careful handling of accurate and confidential records.

This ongoing project is especially relevant because it connects cross-department performance data with operational decision-making. I would bring a structured approach: confirm each reporting question and KPI definition, transform the appropriate data, test completeness and accuracy, present trends in a decision-focused format, and document assumptions so the work remains understandable and repeatable.

Thank you for your consideration. I would welcome a conversation about your data sources, reporting priorities, dashboard environment, and the first business decisions this engagement needs to support.

Best regards,
Jainali Mehta
