RE: Generalist, Mercor

Dear Hiring Manager,

I am applying for the Generalist opportunity supporting Mercor's AI evaluation projects. I completed a Master of Business Analytics at Edith Cowan University in Australia and now live in Toronto, Canada. My background combines an Integrated Master of Business Administration, Australian Data Intern experience, and earlier professional work in education and investment services. This breadth has required me to move between business requirements, spreadsheets, research findings, analytical outputs, client documentation, and written updates while maintaining accuracy and relevance.

At AYLA Solutions in Australia, I gathered and documented business and reporting requirements, supported SQL-based extraction and validation, prepared advanced Excel reports, and contributed evidence-based performance insights. Agile planning and review sessions strengthened my ability to interpret stated expectations, assess whether an output answered the underlying question, communicate progress, and maintain documentation another reviewer could follow.

My project work demonstrates review and analysis across consumer-facing and personal domains. For an online GST-filing study, I designed a survey, organized responses in Excel, used formulas, filters, pivot tables, percentages, and charts, and documented adoption barriers and recommendations. In a Bank of Baroda project, I cleaned and analyzed transaction patterns, created visualizations, and presented recommendations for customer engagement and service delivery. In E-Commerce Sales Analytics, I applied precise transaction-state rules, relational constraints, and repeatable checks so conclusions remained grounded in valid data.

Earlier roles at Trans Globe Education and Arihant Investment developed my document handling, market research, administrative reporting, process updates, record accuracy, confidentiality, and client communication. I use advanced Excel, pivot tables, Microsoft PowerPoint, Microsoft Word, and Google Workspace, supported by graduate coursework spanning decision making, business systems, people analytics, supply chain analytics, databases, and project management.

Formal AI-document evaluation would be a new professional setting for me. I would approach it systematically: identify the document's purpose and audience, apply the supplied rubric consistently, verify facts and calculations, assess completeness and clarity, flag material inconsistencies or omissions, and write concise evidence-based feedback. Mercor interests me because careful human judgment can directly improve the quality and usefulness of AI-generated professional work.

Thank you for considering my application. I would welcome the opportunity to demonstrate my cross-domain judgment, attention to detail, and structured written feedback through Mercor's selection process.

Best regards,
Jainali Mehta
