RE: Business Data Analyst (Contract), JR105877

Dear Hiring Manager,

I am applying for the Business Data Analyst (Contract) position, JR105877. I completed a Master of Business Analytics at Edith Cowan University in Australia and now live in Toronto. I offer an early-career foundation in PostgreSQL and SQL, financial and performance analysis, advanced Excel reporting, data validation, reporting requirements, and clear stakeholder communication.

As a Data Intern at AYLA Solutions in Australia, I gathered and documented business and reporting requirements, supported SQL-based extraction and validation, prepared advanced Excel reports, and contributed insights for business performance tracking. Working through Agile planning and review sessions strengthened my ability to clarify requests, organize analytical work, communicate progress, and maintain usable documentation.

My E-Commerce Sales Analytics project is directly relevant to Moneris's focus on financial insight. I connected customers, products, orders, line items, and payments in a relational model; defined recognized revenue to exclude pending, refunded, and cancelled orders; and analyzed customer spend, product performance, payment methods, and revenue trends. I used integrity constraints and repeatable validation queries to test the figures before interpretation. A Bank of Baroda project also involved cleaning and analyzing transaction patterns in Excel and SQL, visualizing trends, and presenting recommendations.

My other published PostgreSQL projects show breadth across healthcare and workforce information, including normalized schemas, joins, CTEs, rankings, running totals, lag comparisons, window functions, and documented checks. I have also planned Power BI KPI definitions, page layouts, filters, and drill paths. I have not yet built production BI dashboards, used dbt or Snowflake, or accumulated the requested three to five years of relational-database experience. I am applying transparently because the role also values transferable experience, and my work demonstrates the underlying habits: precise definitions, traceable SQL, validation, documentation, and business-focused interpretation.

Moneris's emphasis on trusted financial insights, reporting quality, and business decision support is compelling to me. I would bring disciplined analysis, careful quality checks, well-documented requirements, and the humility to learn your payments data, dbt conventions, Snowflake environment, and BI standards quickly under the Manager, Data Analytics.

Thank you for your time and consideration. I look forward to discussing how I could contribute to your team.

Best regards,
Jainali Mehta
