RE: BI Data Analyst I, Req. 431881

Dear Hiring Manager,

I am applying for Bell's BI Data Analyst I position, requisition 431881. I completed a Master of Business Analytics at Edith Cowan University in Australia and now live in Toronto. My early-career foundation combines PostgreSQL and SQL, advanced Excel reporting, KPI and trend analysis, reporting requirements, quality checks, and clear stakeholder communication—skills aligned with the Consumer BI team's focus on performance measurement and dependable insight.

As a Data Intern at AYLA Solutions in Australia, I gathered and documented business and reporting requirements, supported SQL-based extraction and validation, prepared advanced Excel reports, and contributed insights for performance tracking. Participating in Agile planning and review sessions taught me to clarify the intended business output, organize analytical work, communicate progress, and maintain documentation that other contributors could use.

My published analytics portfolio demonstrates how I turn relational data into performance findings. In E-Commerce Sales Analytics, I connected customers, products, orders, line items, and payments; defined recognized revenue; and examined customer spend, order frequency, product rankings, monthly revenue, and payment methods. Healthcare and workforce projects broadened this work through CTEs, rankings, running totals, lag comparisons, segmentation, and window functions. Across the projects, I used integrity rules and repeatable validation before developing recommendations and Power BI KPI, page, filter, and drill-path plans.

Earlier roles at Trans Globe Education and Arihant Investment strengthened my follow-through across reporting support, process updates, confidential records, research, and client communication. A Bank of Baroda academic analysis also required cleaning transaction data with Excel and SQL, visualizing customer patterns, and presenting recommendations. Together, these experiences prepared me to work carefully across business requests, analytical logic, QA, and audience-ready communication.

My current hands-on foundation is PostgreSQL, SQL, advanced Excel, and Power BI planning rather than SAS or production BI asset maintenance. I am ready to close those gaps through Bell's training opportunities while contributing disciplined requirements analysis, validation, performance interpretation, and collaborative execution. Bell Mobility's scale, focus on current technology, and role in connecting Canadians make that growth especially meaningful to me.

Thank you for your time and consideration. I look forward to discussing how I could contribute to your team.

Best regards,
Jainali Mehta
