RE: Data Analyst, Docebo

Dear Hiring Manager,

I am applying for the Data Analyst position within Docebo's Product Engineering family. I completed a Master of Business Analytics at Edith Cowan University in Australia and now live in Toronto. My early-career foundation combines PostgreSQL, advanced SQL analysis, relational modelling, data validation, KPI design, reporting requirements, and clear communication of decision-focused insights.

At AYLA Solutions in Australia, I gathered and documented business and reporting requirements, supported SQL-based extraction and validation, prepared advanced Excel reports, and contributed dashboard insights for performance tracking. Agile planning and review sessions strengthened my ability to clarify the intended decision, test the underlying information, communicate progress, and maintain documentation that others could use.

My published portfolio shows how I move beyond query completion to interpretation. In E-Commerce Sales Analytics, I connected customers, products, orders, line items, and payments, applied integrity rules, defined recognized-revenue and KPI logic, and created repeatable validation before developing recommendations. My healthcare and workforce projects use CTEs and window functions for rankings, segmentation, running totals, lag comparisons, and performance analysis. Across all three projects, I added GitHub Actions checks and completed Generative AI-assisted analysis grounded in validated SQL outputs, followed by structured Power BI dashboard and visualization planning.

These projects developed the habits Docebo emphasizes: questioning definitions, examining connected business entities, validating logic, documenting assumptions, and translating complex results into accessible recommendations. My direct Power BI evidence is dashboard planning rather than a deployed interactive artifact, so I present it precisely while bringing a strong SQL and data-quality foundation. Earlier roles at Trans Globe Education and Arihant Investment also strengthened my stakeholder communication, coordination, confidentiality, and detail orientation.

Docebo's use of AI to improve how people learn at work is especially compelling to me because it connects technical analysis with a human outcome. I would bring disciplined SQL reasoning, rigorous validation, curiosity, and accountable communication while growing my visualization and product-analytics capabilities within Docebo's collaborative learning culture.

Thank you for your time and consideration. I look forward to discussing how I could contribute to your team.

Best regards,
Jainali Mehta
