Hiring Manager, Product Analytics

Relay — Toronto, Ontario

Dear Hiring Manager,

I am applying for the Data Analyst, Product position with Relay. I currently live in Toronto; my Master of Business Analytics is from Edith Cowan University in Australia, and my Integrated Master of Business Administration is from Atmiya University in India. I offer an early-career foundation in SQL, advanced Excel, relational modelling, customer and payment analysis, data-quality validation, KPI reporting, survey analysis, and Power BI planning.

As a Data Intern at AYLA Solutions in Australia, I gathered and documented business, data, and reporting requirements, supported SQL-based extraction and validation, prepared advanced Excel reports, and contributed dashboard insights for performance tracking. Through Agile planning and review sessions, I coordinated analytical tasks, communicated progress, and maintained accurate documentation.

My projects connect customer behaviour, operational data, and business outcomes. In E-Commerce Sales Analytics, I modelled customers, products, orders, line items, and payments; established revenue and integrity rules; and analyzed spend, frequency, product performance, revenue, and payment methods using CTEs and window functions. I converted verified SQL findings into AI-assisted recommendations and Power BI plans. An earlier Bank of Baroda analysis examined customer transactions, while my GST-adoption research used Google Forms and Excel to identify small-business adoption patterns and barriers.

Graduate coursework in databases, business intelligence, machine learning, and business decision-making supports my analytical foundation. Earlier roles in India strengthened my workflow coordination, reporting support, client communication, and confidentiality.

I want to be precise about my current level. I do not have two years of analyst employment or professional product experimentation, A/B testing, event-log analysis, senior-leadership reporting, or independent dashboard implementation. I have not used Metabase, Sigma, Periscope, Mode, cloud warehouses, dbt, Python, or R. My strongest hands-on tools are SQL and advanced Excel. I would contribute disciplined validation, clear reasoning, documented recommendations, thoughtful business questions, and a structured approach to learning Relay's production analytics stack.

Relay's mission resonates because cash-flow clarity can help self-made owners replace financial uncertainty with better daily decisions. Its integrated approach to banking, expense management, accounts payable, and financial visibility creates meaningful product questions around activation, engagement, retention, and customer outcomes. I would welcome the opportunity to bring my analytical foundation and AI-assisted working approach to those questions while growing into deeper product experimentation and BI ownership.

Thank you for your time and consideration. I look forward to discussing how I could contribute to your team.

Best regards,

Jainali Mehta
