Hiring Manager

City of Toronto

Parks & Recreation – Business & Technology Transformation

Metro Hall, 55 John Street, Toronto, ON

Dear Hiring Manager,

I currently live in Toronto and am applying to the City of Toronto for the Data Analyst & Integrator position, Job ID 64125. I earned my Master of Business Analytics from Edith Cowan University in Australia and my Integrated Master of Business Administration from Atmiya University in India. The opportunity to improve Parks & Recreation data quality and implementation readiness strongly matches my foundation in PostgreSQL, SQL, relational modelling, validation, reporting, and business requirements.

As a Data Intern at AYLA Solutions in Australia in 2025, I gathered and documented business, data, and reporting requirements and translated stakeholder questions into structured analytical needs and definitions. I supported SQL extraction and validation, prepared advanced Excel reports, and contributed dashboard insights for performance tracking. Through Agile planning and reviews, I communicated progress and data findings and maintained clear analytical documentation. This experience taught me to connect business questions, data quality, and reporting outputs while collaborating with stakeholders.

My three published projects provide direct evidence of data modelling, quality controls, repeatable validation, and decision-focused analysis. In e-commerce analytics, I connected customers, products, orders, line items, and payments through primary and foreign keys, uniqueness rules, checks, and documented revenue definitions. I added automated GitHub Actions validation and analyzed revenue, customer, product, and payment indicators. Healthcare and workforce projects extend this work across six connected operational entities and employee, salary, performance, and attendance data. I used CTEs and window functions for rankings, segmentation, running totals, and lag analysis while documenting assumptions and translating validated findings into Generative AI-assisted recommendations and Power BI reporting plans.

My earlier roles at Trans Globe Education and Arihant Investment in India strengthened my administrative reporting, records management, workflow coordination, client communication, and careful handling of confidential information. Graduate coursework in Databases and Business Intelligence, Machine Learning, Enterprise Architecture, and Business Systems Analysis strengthened my technical foundation.

I am ready to extend this foundation into source-to-target mapping, ETL workflows, migration reconciliation, spatial data, and IBM Maximo while learning from City specialists. I would bring disciplined validation, clear documentation, analytical curiosity, and dependable stakeholder support to the transformation team.

Thank you for considering my application. I would welcome the opportunity to discuss my contribution to Parks & Recreation's data transformation work.

Best regards,

Jainali Mehta
