Hiring Manager, Data & Analytics

EllisDon — Ontario, Canada

Dear Hiring Manager,

I am applying for the Data Analyst position with EllisDon. I currently live in Toronto; my Master of Business Analytics is from Edith Cowan University in Australia, and my Integrated Master of Business Administration is from Atmiya University in India. I offer an early-career foundation in PostgreSQL, SQL, advanced Excel, relational modelling, quantitative analysis, requirements validation, data-quality controls, KPI reporting, Power BI planning, and stakeholder communication.

As a Data Intern at AYLA Solutions in Australia, I gathered and documented business, data, and reporting requirements, supported SQL-based extraction and validation, prepared advanced Excel reports, and contributed dashboard insights for performance tracking. Through Agile planning and review sessions, I coordinated analytical tasks, communicated progress, and maintained accurate documentation.

My projects cover workforce, financial, and operational analysis. In HR Analytics, I modelled departments, employees, salaries, performance, and attendance and examined headcount, compensation, performance, attendance, hiring, and tenure. E-commerce and healthcare projects add revenue rules, payments, completion, costs, billing, workload, and claims analysis. Across them, I used joins, CTEs, rankings, running totals, lag comparisons, and window functions; documented rules and assumptions; added repeatable validation and GitHub Actions; and converted SQL findings into AI-assisted recommendations and Power BI plans.

Graduate coursework in Databases and Business Intelligence, Analytics and Business Decision Making, and Enterprise Architecture supports my analytical foundation. Earlier roles in India strengthened my workflow coordination, client communication, reporting support, record accuracy, and confidentiality.

I want to be precise about my present level. I do not have two to four years of analyst employment or construction-project experience. I have not implemented data migrations, ETL pipelines, data-collection systems, or interactive dashboards, and I have not used DundasBI, NoSQL, Workday, or specialized statistical and scripting packages. My strongest hands-on tools are SQL and advanced Excel. I would contribute disciplined validation, clear requirements, reliable metrics, and a structured approach to learning EllisDon's environment and standards.

EllisDon's Digital & Data Engineering and Building Digital work demonstrates a practical commitment to analytics, enterprise software, and construction technology. Its employee-owned culture and values of freedom and trust, mutual accountability, entrepreneurial enthusiasm, integrity, and mutual respect also make the opportunity compelling. I would welcome the chance to support trustworthy data products and decisions while developing deeper migration, ETL, BI, and construction-domain capability.

Thank you for your time and consideration. I look forward to discussing how I could contribute to your team.

Best regards,

Jainali Mehta
